Eyelet Feed-Thru Capacitors

Net Price .30★

Hi-Q Feed-Thru Capacitors Eyelet Type are the ultimate in miniaturization because of unique design. This design is such that the capacitors can be soldered directly to a chassis and provide excellent bypass performance where space is critical. The low inductance characteristics brought about through the construction of the capacitors make the eyelet type ideal for high frequency bypass.

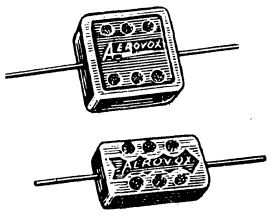
RECEIVING MICA CAPACITORS — (Continued)



Type 1468LS-HV and 1467LS-HV

Designed especially for television, low power transmitters and power amplifier applications, these capacitors feature the highest voltages ever before available in these case sizes. They are furnished in silvered mica but molded in yellow Bakelite. As stock is replenished they will be molded in red Bakelite. Standard Tolerance is plus and minus 20% and they are tested to meet EIA standards. Units are marked with capacity and working voltage and are tested at double the rated voltage to insure long life.

DIPPED, SILVERED MICA CAPACITORS
TYPES ADM-15, ADM-19, ADM-20 and ADM-30

Aerovox plastic-coated dipped-mica units exceed many of the advantages of molded mica units, and at the same time are smaller than conventional units. Meeting all the applicable MIL-C-5B Test Standards for molded mica capacitors, these unique dipped-mica units offer the following features:

• High operating temperatures —55° to +125°C • Excellent long-life characteristics • Improved temperature coefficient range • Radial leads for automatic insertion and plug-in assemblies • Ideal for printed-wiring assemblies • Unsurpassed performance and stability characteristics • Smaller physical size.

Humidity Resistance: these capacitors shall have an insulation resistance of not less than 2,000 megohms after being subjected to the Humidity Resistance Test as outlined in MIL-C-5B. Minimum Insulation Resistance: 25,000 megohms at 25°C; 1000 meghoms at 125°C.

Capacitors will be marked with capacity and tolerance. In addition voltage rating wil be marked on all units other than 500 volts rating.

TYPES 1550L, 1570L and 1590L Potted Transmitting Capacitors

These potted transmitting capacitors in thermo-setting case materials have greater load-carrying capacity than molded-in-thermo-setting case material capacitors. Types 1550 to 1590, inclusive, not only have high voltage rating but afford higher current ratings than equivalent capacitances in thermo-setting case material units. Because of their construction they are made with higher capacitance stability. Furnished only in low-loss thermo-setting case material as standard. Bakelite cased mica stack capacitors. These units have highest quality mica sections stacked for greater load carrying capacity. The sections are potted in low-loss bakelite cases and permanently clamped with non-magnetic material.

Stack-Mounting Transmitting Capacitors

These stack-mounting transmitting mica capacitors are especially intended for various applications such as grid, plate blocking, coupling, tank, and by-passing functions for higher-powered installations. They are made with a special cylindrical low-loss, glazed ceramic case providing a long creepage path between terminals. They are designed to eliminate corona losses, inside and outside alike, and also provide uniform voltage gradient. The cast-aluminum terminal ends provide low contact resistance between units. These units are conservatively rated to withstand surge voltages above their rated values. They have extremely low power factor so that they can handle large KVA loads without overheating.

Laboratory quality Standards in capacitance, resistance and inductance at a price far below that of equivalent quality Standards. Available in ten units: three resistance decades, three capacitance decades and four inductance decades. Housed in a seamless, drawn steel case coated with grey enamel. Panels are black with the markings engraved in white.

All ratings are maximum and no guarantee can be enforced if ratings are exceeded in any way. Overload can change accuracy or cause actual burn-outs.

Multiple dial units have the highest value multipliers on the left-hand side so that readings are in order exactly as they should be read.

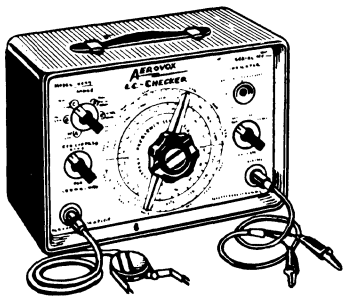
AEROVOX L-C CHECKER—MODEL 97

Net Price: $69.95



A versatile instrument for testing capacitance in circuit **without removing either lead of the capacitor from the circuit.**

Incorporates latest design and printed-circuit techniques to provide the service technician with the most efficient, versatile L-C checker available.

Features include: extended frequency range from 74 kc min. to 44 mc max.; recessed front panel has large, easy-to-read dial with indicator; attractive grey finish; weighs only 8½ lbs.; size 13" x 8½" x 6" deep; complete with test cords and probes.

1. Checking capacitors in circuit for values of capacitance and relative Q at radio frequency.
2. Checking capacitor insulation resistance (leakage).
3. Checking alignment of radio frequency and intermediate frequency circuits of domestic, marine, and short-wave receivers.
4. Tracking super-het oscillators.
5. Checking alignment of FM-I.F. channels and independent alignment of FM-I.F. transformers.
6. Checking resonant absorption troubles in "all wave" receiver circuits, locating dead spots, etc.

ELMENCO CAPACITORS

Type VCM-20

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL USES has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; just wire right into the circuit.

The capacitors are molded in low-loss Phenolic Resin in CM-20, CM-35, CM-42 cases and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient capacitance drift, susceptibility to humidity, and length of life, according to RMA Standards. All units are wax-dipped for protection against salt water immersion.

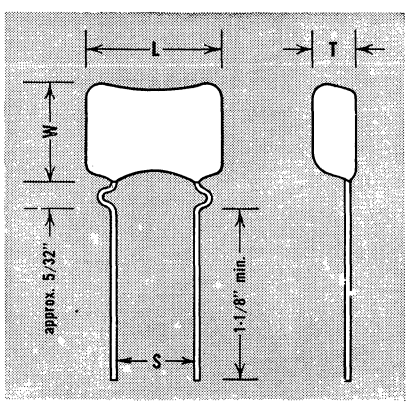
Crimped Leads

In addition to the straight lead design, DM capacitors are also available with crimped leads for printed circuit application. The crimp provides a positive stop when capacitors are mounted. This prevents interference of resin coat on the leads with dip-solder operation, provides greater mounting uniformity, and elevates the components slightly above the surface of the board. The crimp lead design is not a regularly stocked item, but it is available to special order at a small fixed handling charge.



Lead wire gage for crimped lead units is the same as for straight lead capacitors with the exception of DM15 and DM16. Crimped lead gage of DM15 and DM16 is #20.

Maximum Dimensions

The following is a tabulation of maximum dimensions of the various DM case sizes. They have been specified to anticipate variations in coat thickness and minor protrusions on the surface. As a result, average dimensions of a given lot may be appreciably smaller than those listed.

It is to be noted that the leads are not centered in the thickness dimension as can be seen on the end view dimensional drawing. Construction of Elmenco Dur-Mica capacitors provides for leads to project from one surface of the mica stack, causing them in turn to extend from one edge of the capacitor. Regardless of case size and overall thickness, leads will always be within 1/16 to 3/32 from one of the capacitor surfaces.

The "W" dimension specifies the distance from the top of the capacitor to the point where the visible dip-coat ends on the leads. However, for reliable lead attachment, another 5/64 lead length should be allowed for resinous coating before solder connection is made.

Not all dimensions of every capacitance value are listed below. It has been found that size varies almost linearly with capacitance value. As a result, dimensions of values between those specified below should be determined by interpolation.

SCDM15 capacitors are units which have been given a single protective resin coat rather than the full series of dips to which standard units are subjected. There is a marked difference in size of these thin-coated capacitors, but there is a sacrifice in moisture resistance as a result. SCDM15 units are therefore recommended for applications requiring extreme miniaturization such as military and transistor filter, networks, and delay lines. However, for long term high reliability of operation, the capacitors should receive additional environmental protection such as encapsulation, circuit potting, or hermetic sealing.

HIGH VOLTAGE DUR-MICA

A new line of ELMENCO Silvered Hi-Voltage Dur-Mica capacitors is now available to complement the similar values in the molded configuration. These high voltage capacitors afford the same facility of use in low power applications by providing reliable operation in a small case size. Elmenco Dur-Mica capacitors may be substituted for similarly rated molded units normally supplied in the larger CM45, CM50, CM55, and CM60 case sizes.
The Dur-Mica design provides advantage of higher temperature operation (125° C. max.); radial leads for printed circuit application; higher capacitance in a given case size; and improved reliability. The dipped units, being solidly impregnated with corona resistant material, do not have the voids which make molded types susceptible to corona. As a result, the dipped capacitors can be supplied with voltage rating as high as 5000VDCW.
All Elmenco Dur-Mica capacitors are silvered mica construction. They conform to electrical and environmental specifications set forth in MIL-C-5 specifications.

ELMENCO CAPACITORS

TYPE MPD

DIPPED MYLAR*—PAPER (Elmenco type MPD)

The new Elmenco Type MPD (ARCO dp) capacitors are dip-coated tubular Mylar*-paper dielectric capacitors. They represent a double breakthrough in capacitor design by combining missile and computer quality with commercial radio-TV cost. The "dp" series is designed for near universal use from TV by-pass to critical industrial applications requiring stringent electrical and environmental characteristics. New high levels of ruggedness, stability, and reliability have been achieved, yet these new Elmenco capacitors are miniaturized for transistor circuitry.

Elmenco Type MPD capacitors are non-inductively wound and vacuum dipped to obtain solid impregnation and a rugged, moisture-proof coat. New fabricating techniques realize the full potential of the dielectric materials utilizing most of the low-cost procedures of the exclusive Elmenco dip-coat process. The result is a product of electrical excellence with high reliability in operation at 110°C. without derating. The specifications listed on this and following pages well-illustrate the inherent quality of these capacitors.

NOTE: The 100VDCW rated dp units are pure mylar* dielectric capacitors.

Part Numbers:

The part numbers indicated in the table of values on page 385 are constructed as follows:

6 DP - 2 - 103

- 6 — Voltage Rating (in 100's of volts DCW)
- DP — Type Designation
- 2 — Case Size
- 103 — Cap. Value (2 sig. figs. & dec. mult.)

The above example calls for a .01 mfd. capacitor with a 600VDCW voltage rating. Case dimensions are shown in the table of values listing on page 365.

ELMENCO CAPACITORS

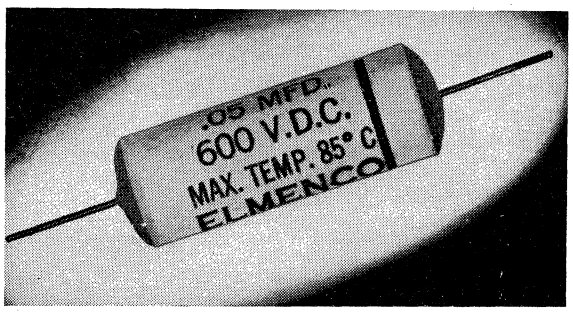
TYPE CP

STEATITE TUBULAR CAPACITORS CP TYPE



El-Menco CP type paper tubular capacitors are sealed into Steatite Tubes which serve to insulate the capacitor electrically as well as against moisture and heat. The capacitor insert is impregnated with Mineral Oil, thereby assuring long life at 85° C operating conditions. This feature insures successful operation at the high ambient temperatures existing in small, compact enclosures.

The Non-Inductively wound paper and foil units are sealed in the Ceramic Tubes by means of baked Synthetic Resin End Fills which cannot melt at any conceivable operating temperature. The end fills will not dissolve in wax, permitting the capacitors to be potted without damage to the insert. Leads are of tinned copper 2¼" long.

MINERAL OIL IMPREGNATION NON INDUCTIVE WINDING SYNTHETIC RESIN END SEALS — STEATITE CASE

The Steatite tube and baked synthetic resin end-fill provide a seal which rivals that of hermetically sealed construction, resulting in a dependability and longevity previously unequalled. Whether in operation or on the shelf, this paper tubular capacitor will maintain its excellent characteristics for years.

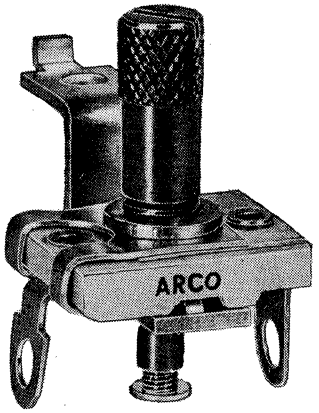
ELMENCO CAPACITORS

TYPES S46, L30

VARIABLE COMPRESSION MICA CAPACITORS



TYPE S46

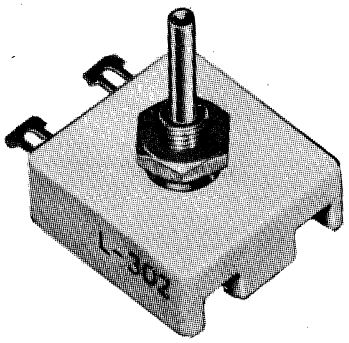
List Price:
Add 45¢ to the list price of trimmer alone

A complete Type 46 trimmer assembly with mounting bracket and adjusting shaft for ease of tuning. Can be supplied as pictured from stock or with construction variations to order.

To specify precede trimmer part number with the letter "S".

For example:

Type 460 trimmer will be ordered as S-460.



TYPE - L30

List Price:
Add 10¢ to the list price of padder alone

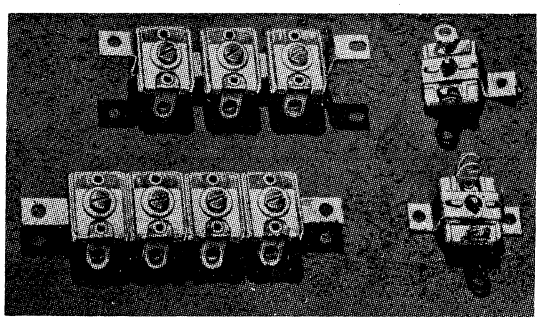
The Type 30 or Type 30M padder can now be obtained with a special adjusting screw which has been lengthened to accommodate a tuning knob. To obtain a padder with the special screw, precede the regular padder part number with the letter "L". For example, a 302 padder with the special screw would be specified as "L-302".

●

NOTE: Knobs may also be obtained if desired at a cost of 30¢ each list.

The two new assemblies shown at left have been developed due to increasing demands for miniaturized tuning devices. However, certain precautions must be taken in design so that these variable mica capacitors are not used in circuits for which they are not adapted. These assemblies are highly stable for components of their design, but they do not match the stability of the air dielectric tuners. Short term drift of the mica trimmers and padders after tuning is negligible. Long term drift at one setting due to changes in atmospheric conditions and physical motion should be well within ± 2%.

It should also be remembered that variable compression type mica capacitors do not have linear variation with adjustment. Rate of change of capacity decreases per turn as the screw is withdrawn. For example, a 306 padder will reduce to half the nominal maximum value within one opening turn. Those with a greater number of plates require further screw disengagement for a similar percentage reduction in capacity value. On the other hand, a 302 padder will reach one-half the nominal maximum in less than one-half turn open. Type 46 trimmers operate in much the same way. Detailed information on specific sizes is available upon request.



Mounting brackets as illustrated above can be supplied for all types of trimmers in flat "Z" (single mounting hole with or without non-rotational stop), and "U" (dual mounting hole) configurations.

TRIMMERS

El-Menco Trimming Condensers are treated for resistance to humidity and for permanence of capacity setting.

The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.

The soldering lugs may be bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.

Trimmers shown here are standard sizes and capacities.

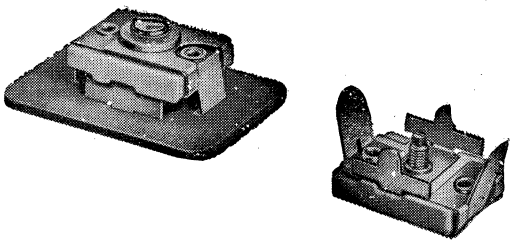
PRINTED CIRCUIT TRIMMERS



The Elmenco Type 46 trimmer series has been adapted for printed circuit techniques through alteration of terminals and mounting configuration. The holes in the terminal lugs are removed since necessity for hook-up is eliminated. The resulting solid terminals have greatly increased spring action, allowing the trimmer to be "snapped-in" the circuit and firmly held until soldered.

This printed circuit trimmer, available at present only in the Type 46 style, is identified by the prefix letter "PC". All capacitance ranges listed for Type 46 are available, designated as part numbers PC460 through PC468.

For list price add $0.05 to list price of standard Type 46 trimmer.

CERAMIC DISC

MINIATURE GENERAL PURPOSE

Elmenco Type CCD ceramic disc capacitors have improved ceramic bodies which impart longer life and greater stability to any application. The standard CCD line has a ±10% tolerance and 1000VDCW rating, making possible a single ceramic disc stock for universal use. Whether a broad coupling or by-pass application, or a critical close tolerance use, Elmenco CCD units fill the bill with dependability and economy. The 'space-saving' size of Elmenco discs is another feature designed to offer greater service convenience with complete safety of operation. In addition to the 1000VDCW line, higher voltage ratings are available in Type CCD units. 3000VDCW (Type 3CCD) and 6000-VDCW (Type 6CCD) disc ceramics are supplied in tolerance of ±20%.

TEMPERATURE STABLE

This new ELMENCO ceramic capacitor maintains excellent capacitance stability with wide temperature variation. The graph illustrates typical percentage variation of capacity value with temperature. The operating temperature range has been extended to −55°C. to +125°C. without derating of the 1000VDCW specification. Standard tolerance is ±10%. The combined small size, low cost, and high stability represents another significant advance in the quality line of ELMENCO capacitors. All units are marked "TS" for identification.

TYPE CCTO

Elmenco Type CCTO ceramic disc capacitors are zero temperature coefficient units specifically suited for high stability, high Q application. In addition to extreme temperature stability, Type CCTO capacitors have very high insulation resistance and low aging rate. These special characteristics are added to the high 1000VDCW rating and close tolerance of the entire Elmenco ceramic line to provide a superior capacitor for the special purpose intended. Type CCTO capacitors are identified by "NPO" printed on each unit.

TYPE CCTN

Another member of the Elmenco temperature compensating disc ceramic line is the Type CCTN unit which has a negative temperature coefficient of —750 ppm/°C. (N750). These units are used to counterbalance shifts in other circuit components with change in temperature. The result is a more stable circuit essential to many frequency control applications. Improved ceramic bodies in the temperature compensating line provide greater long term stability in addition to accurate temperature compensation. Type CCTN capacitors are identified by "N750" imprinted on each unit except the smallest size. On the small units the E.I.A. temperature coefficient designation "U2" is imprinted.

MOTOR START A. C. ELECTROLYTIC CAPACITORS in molded plastic case

GENERAL DESCRIPTION

ARCO Type CMB A.C. Motor Start Electrolytic Capacitors are designed to provide high capacitance under heavy current conditions for short, widely-spaced periods of time. The use of high purity aluminum foil and other premium ingredients combined with conservative design insures long term reliable service. Particular attention is paid to the assurance of permanence of capacitance setting during long periods of idleness, low power factor, and resistance to sudden voltage surges in excess of rated voltage. Type CMB capacitors exceed published N.E.M.A. specifications for this style component.

The shock-resistant molded phenolic case affords excellent physical and moisture protection. Accessory parts include snap-on mounting brackets and molded phenolic end caps for added protection against dirt and moisture. Three styles of terminal are available:

1. Single blade with eyelet (TYPE CMB)
2. Dual blade with eyelet to facilitate multiple connections. (TYPE CMBD)
3. Molded phenolic top with 10-32 threaded female terminals. TYPE CMBT)

SPECIFICATIONS

A.C. VOLTAGE RATINGS:
110, 125, 165, 220, 250, and 330 volts.
A momentary overload of 125% of rated voltage is allowed.

TEMPERATURE RANGE:
—30°C. to +65°C.
All specifications apply to operation at maximum 65°C. However, 85°C. operation can be reliably obtained with proper derating of either duty cycle, voltage, or both. It is the amount of heat generated while in operaton that governs reliability of this style capacitor. At —30°C. capacitance value is significantly lower and power factor higher. However, the heat generated upon application of A.C. voltage speedily restores these measurements to normal values for proper performance.

DUTY CYCLE:
At maximum rated voltage and temperature, it is recommended that there be no more than 20 starts per hour, evenly spaced, each no more than three seconds in duration.

POWER FACTOR:
Power factor will not exceed 10% when measured at a frequency of 60 cycles per second at 25°C.
All other operating and test characteristics conform to the current N.E.M.A. specifications covering A.C. electrolytic motor start capacitors.

Type PJ capacitors are polystyrene dielectric enclosed in silicone treated fused polystyrene jackets. The same superior quality of the Type PT hermetically sealed units is preserved in Type PJ units while effecting a marked saving in both size and price. Extensive evaluation has confirmed the excellent moisture resistance of this design as well as extreme ruggedness. The Type PJ will meet MIL tests for vibration, shock, moisture resistance and immersion as well as providing the excellent electrical characteristics specified.

MINIMITE* TYPE MM

Miniature Metal-Cased Tubular Electrolytics

"SM" Safety Margin Construction*

- Hermetically sealed aluminum-cased tubulars. Small and light. Ideal for under-chassis mounting in compact, tight assemblies.
- Designed to withstand high surge voltages and high ripple currents. Stable capacitance characteristics. Long service life.
- Exceptionally low leakage. Terminal tab connections provide permanent low-resistance contact for life of the unit.
- Outer insulating tube. Duals have centered mounting strap, and 3 leads (common negative).

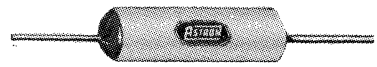
TYPE EK

Miniature Ceramic Cased Electrolytics



Astron Type EK ceramic cased subminiature electrolytics are small capacitors, designed for all industrial and commercial applications. Using a steatite case, they are second only to hermetically sealed metal cased units in moisture and humidity resistance. High capacity, low voltage and extremely small size are the features that make the Astron EK highly suitable for application in transistorized circuitry and miniature electronic instruments and equipment.

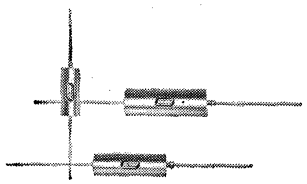
ACTUAL SIZE



TYPE TES

Solid Electrolyte Tantalum Capacitors

The Astron Type TES solid electrolyte tantalum capacitor is a subminiature metal cased, hermetically sealed unit, containing solid materials only. A new development in solid state technology allows the use of a semiconductor electrolyte, resulting in capacitors of improved reliability over a wide range of environmental conditions.

The tantalum oxide dielectric endows these capacitors with long shelf life and stability even at maximum rated temperature. The solid manganese dioxide electrolyte can never leak or corrode even if the seals are damaged or destroyed. The dissipation factor is low over the temperature range of −80°C. to +125°C. and the capacitor variation averages ±4% of the 25°C. value. TES capacitors are polar units. The case is the negative terminal. At 25°C., a maximum of 6% dissipation factor is allowed.

NOTES TO STANDARD RATINGS

I — TO ORDER: Simply write the partial catalog number indicated for the listed capacitance and add the listed WVDC.

Example:

Listed Capacitance	.0068
Partial Catalog Number	TES-0068
Listed WVDC	20
Catalog (Order) Number	TES-0068-20

II — Ratings appearing in bold face are available in either ±20% or ±10% tolerance (with exception of 40M and 60M). All other ratings are available in 10% tolerance only. To designate 10% tolerance, add −10 to the catalog No. For example—TES-15M-20-10.

III — For insulating sleeve add (M) (R) designation to catalog number: Example — TESM-15M-20; TESR for rigid type.

IV — Higher capacities and voltages than those shown above will be available in the near future. Special ratings and tolerances are available on request.

ASTRON® capacitors

ASTRON CORPORATION
EAST NEWARK, N. J.

BLUE POINT® TYPE BP

Molded Plastic Tubulars

- A MAJOR ACHIEVEMENT in molded capacitor construction and performance. Engineered and produced exclusively by ASTRON (Pat. Pend.). Greatest protection against heat, moisture and humidity.
- Designed for continuous operation at 85°C. WITHOUT DERATING.
- Toughest shell bonded with tightest immersion-proof seal . . . unaffected by soldering iron heat. Leads cannot pull or melt out.
- Solid thermosetting impregnant. Vacuum impregnated sections—as in hermetically sealed metal case capacitors—insure uniformity and dependability of every unit.

ASTRON® capacitors

ASTRON CORPORATION
EAST NEWARK, N. J

METEOR* SUBMINIATURE PAPER CAPACITORS

For 125°C. Operation without voltage derating

- Amazingly small sizes, compact and light-weight units.
- Highly dependable operation at temperatures up to 125°C. **without voltage derating.**
- Exceptional capacitance stability, less than 5% change, over entire temperature range of —65°C. to +125°C. due to use of ASTRON-developed high-temperature impregnant X-250*.
- High insulation resistance, low power factor, unusually low resonance loss. High test voltage indicates extra margin of safety in operation.
- Built to exceed stringent requirements of Specification MIL-C-25A.
- Positive hermetic closure of the metal cases is assured by glass-to-metal solder seal terminals.
- Tubulars supplied in a variety of construction and mounting styles to meet your specific needs: extended foil or inserted tab; capacitor section grounded to case or insulated from case; plastic outer sleeve; with soldered-on tangential or L-type bracket; screw neck mounting style; or stud-base mounting style.

METALITE®

Metallized Paper Capacitors for 65°C. and 85°C. Operation

METALITE CAPACITORS

Feature:

- Ultra-compact sizes. Light weight. Ideal for miniaturization applications, and portable, mobile and airborne equipment.
- As much as 75% reduction in size over conventional paper-foil capacitors.
- Self-healing — the ability to withstand high dielectric stresses. METALITE capacitors can be subjected to momentary overvoltages and surges over and over again without danger of permanent failure.
- Temperature Range (Metal cased units) −65°C. to +85°C.; (cardboard cased Type ML) −55°C. to +65°C.
- Excellent RF characteristics. Low RF impedance due to small sizes and short current path. Low power factor.
- Wide variety of applications: RF and audio bypass circuits, noise suppression filters and systems, instruments, and various types of communication equipment where small size, light weight and the self-healing feature are especially desirable characteristics to meet specific circuit requirements.
- Interchangeability with standard paper-foil capacitor designs when operated within published ratings and circuit requirements.

METALITE® TYPE MQCF

85°C. Operation

Glass-to-Metal Sealed
SUBMINIATURE TUBULARS

- Smallest paper capacitor type available.
- Temperature Range —65°C. to +85°C.
- Non-inductively wound. Mineral wax impregnated and filled. Tinned, non-ferrous metal cases.
- Capacitor section grounded to case (Type MQC) with glass-to-metal terminal at one end. Available also with capacitor section insulated from case (Type MQCF) with glass-to-metal terminal at each end.
- Lead length 1¾" minimum. Standard capacitance tolerance: ±20%.

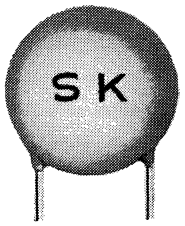
TEMPERATURE COMPENSATING CERAMIC CAPACITORS DISC (TCD)

SKOTTIE ELECTRONICS CORPORATION
PECKVILLE, PENNSYLVANIA
A WHOLLY-OWNED SUBSIDIARY OF ASTRON CORPORATION



CHARACTERISTICS AND APPLICATIONS: Changes in ambient temperature affect the values of the various components which make up any receiver. This alters the exact frequency of resonance as is illustrated by some "drifty" tuners which must be retuned after they have warmed up. It is possible to control this by introducing reactive components of such temperature characteristics and of such values as to offset the undesired changes.

Available Capacitance—temperature characteristics range from a change of plus 100 parts per million per degree centigrade (P100) to a negative change of 5600 parts per million (N5600).

ALL-PURPOSE CERAMIC CAPACITORS

SKOTTIE STYLE TXD all purpose ceramics provide the highest available capacitances at 250°C. in the smallest possible size. These capacitors exhibit less capacitance change with temperature than the limits specified in the EIA RS-198 specification for Z5U ceramics. This specification allows a maximum capacitance change of +22% and −56% along a temperature range of +10°C. to +85°C.

SKOTTIE STYLE TSD: Stable Capacitance Ceramics afford the best available linearity of capacitance with temperature for an extended temperature range. These units are notable for extremely low aging rate and excellent dielectric strength. The standard 500 V.D.C. working voltage rating is ultra conservative.

SPECIFICATIONS: TXD, TSD, TFD

WORKING VOLTAGE: 500 W.V.D.C. (Higher voltages available.)

TEST VOLTAGE (Flash): 2000 W.V.D.C.

POWER FACTOR: 1.5% Maximum at 1kc (initial).

CAPACITANCE: Measured at 25°C, an RMS voltage between 0.5 and 5.0 and a frequency of 1kc.

INITIAL INSULATION RESISTANCE: Over 10000 megohms.

INSULATION: Durez — vacuum-wax impregnated.

LEADS: No. 22 tinned copper (.026" diameter).

CODING: Manufacturer's identification, capacitance and tolerance stamped on disc.

CAPACITANCE TOLERANCES: Available as shown.

SKOTTIE STYLE TFD: Semi-stable Capacitance Ceramics exceed the standards specified in the EIA RS-198 specification for Y5S temperature characteristics. This specification allows a maximum capacitance change of ±22% along a temperature range of −30°C to +85°C. These capacitors exhibit excellent capacitance stability with voltage and frequency and afford relatively high capacitance vs. size.

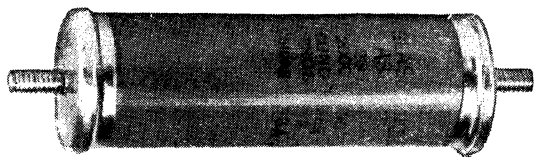
"Glassmike" Plasticon Capacitors



Type ASG

Type ASG are Plasticon A dielectric-silicone fluid impregnated capacitor elements in hermetically sealed glass tubes. Standard range —60°C to +85°C, extended range —60°C to +125°C with proper derating. The smallest and lightest high voltage capacitors made. Type ASG are ideal for DC and low frequency AC applications.

LSG type capacitors have Plasticon L film-silicone fluid impregnant. Designed to compete with mica capacitors, the LSG capacitors are more applicable for Radio Frequency. Special beneficial features include greater safety factor, lower RF loss, more conveniently mounted, utilizes less chassis space, impervious to moisture, and smaller in overall volume.

All 19/32 diameter Glassmikes are supplied with pigtail leads.

"BLUE BEAVER" ELECTROLYTIC TUBULARS

TYPE BBR

TYPE BR

BBR

Type BBR "BLUE BEAVERS," miniature versions of the BR, are especially popular for cramped space installations in television receivers, hearing aids, miniature radios and other small assemblies. They are hermetically sealed *in tubular aluminum containers with cardboard sleeve* and ideally suited to meet requirements in low voltage circuits. NEGATIVE TERMINAL IS GROUNDED TO CAN.

The anodes AND cathodes of all 150 volt BBR and BR units are ETCHED. This feature recommends these types for use with JUNCTION RECTIFIERS.

BR

Type BR is the compact unit in *aluminum can with cardboard outer sleeve*. Fits neatly into the cramped quarters, self-supported by rigid tinned copper-bearing alloy leads. Larger sizes may be further supported by a metal strap. NEGATIVE TERMINAL IS GROUNDED TO CAN.

TEMPERATURE RANGE: to +85°C except 500 V. D.C., to +65°C.

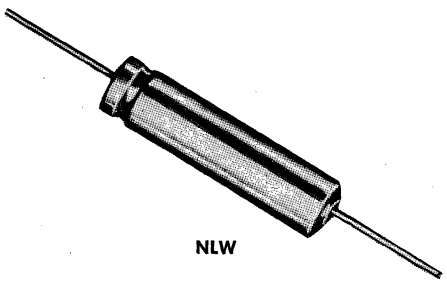
MINIATURIZED ELECTROLYTICS FOR TRANSISTORIZED AND PRINTED CIRCUITRY

"ELECTOMITE"® METAL-CASED



NLW

Type **NLW** is an aluminum foil capacitor, hermetically sealed into an ultra-small tubular aluminum can which is tightly fitted with an outer transparent plastic sleeve to insure freedom from "shorts" with adjacent components commonly found in compact assemblies. All terminal connections are securely welded. Despite their extremely small size, "Electomites" exhibit excellent electrical characteristics as well as rugged physical construction. Ideal for by-pass, filter and coupling applications in low-voltage, compact, miniaturized equipment.

TEMPERATURE RANGE: −20°C. to +85°C.
TOLERANCE: −10%, +150%

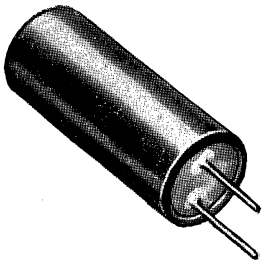
MINIATURIZED ELECTROLYTICS FOR TRANSISTORIZED AND PRINTED CIRCUITRY

PHENOLIC-CASED PARALLEL LEADS



ECPB

Type **ECPB** is an aluminum foil electrolytic capacitor embedded and sealed into a premolded phenolic case with single-ended, parallel lead termination. A special cast-resin sealer is employed which forms a moisture-tight seal and anchor for the pull-proof leads. This construction is especially well suited to printed board assemblies and because of its ultra-small size, is ideal for compact transistor circuitry.

Scrupulous selection of high-purity materials and precise fabrication assure a unit of the highest dependability.

TEMPERATURE RANGE: −20°C. to +65°C.

TOLERANCE: −10%, +150%

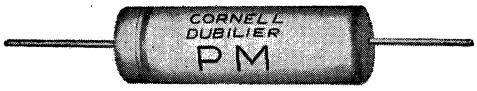
CDE CORNELL-DUBILIER

MOLDED MYLAR* TUBULARS



PM

CDE type PM is a MYLAR* dielectric, high temperature, moisture resistant molded tubular capacitor. The thermoset molded case is tough and non-inflammable. The Mylar dielectric assures dependable operation under high humidity conditions, and it exhibits very high insulation resistance. Low RF impedance of these capacitors makes them ideal for all general bypass and coupling applications. High stability under changes in temperature makes these capacitors excellent replacements in tuned circuits.

TOLERANCE: ±10%

TEMPERATURE RANGE: —55°C to +130°C.

Derate voltage by 10% at 100°C; by 50% at 130°C. Full rating at 85°C.

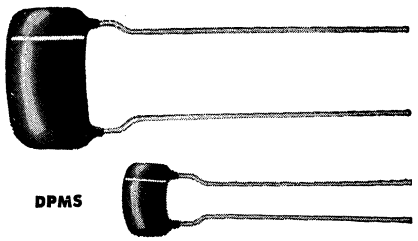
PAPER-MYLAR* DIELECTRIC SIDE-LEAD TUBULARS



Type **DPMS** is unique in that it is constructed with TWO dielectrics — Mylar* Polyester Film and a film of the very highest grade paper. The combination of the two thus provides the best features of both —

★ **HIGH TEMPERATURE OPERATION**

★ **HIGH INSULATION RESISTANCE**

★ **HIGH RELIABILITY**

★ **COMPACT — SPACE SAVING**

★ **IDEAL For Printed and Transistorized Circuitry**

"FIXFIL" impregnant, a C-D exclusive, assures stability of temperature characteristics. This solid thermosetting compound will not crack, soften or flow, even at maximum operating temperatures.

The **DPMS** has a "dipped" rock-hard casing which holds wire leads rigidly at fixed spacings. This tough, durable material has high humidity resistance, high dielectric strength against grounding and is unaffected by accidental contact with soldering iron. The crimped side-leads are space saving and permit uniform mounting of units parallel to the plane of the chassis or printed wiring board.

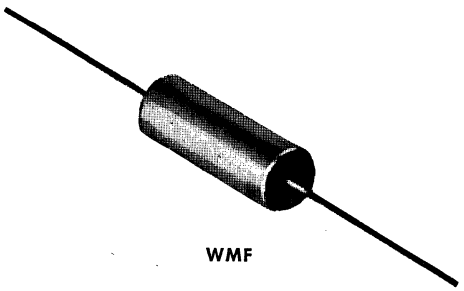
MYLAR* DIELECTRIC FILM-ENCASED



WMF

Type WMF is an ultra-compact Mylar dielectric tubular capacitor encased in a thin, tough Mylar film wrapping and end-sealed with a high density thermosetting plastic. A most desirable unit where a metal-cased unit is not indicated. The WMF is extremely small in size, has high resistance to humidity and excellent capacitance stability with temperature and life.

TEMPERATURE RANGE: —55°C. to +125°C.
Full rated voltage at 85°C.
Derate voltage 10% at 100°C.
Derate voltage 50% at 125°C.

TOLERANCE: ±10%.

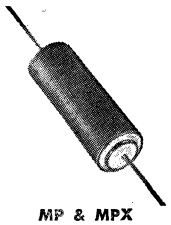
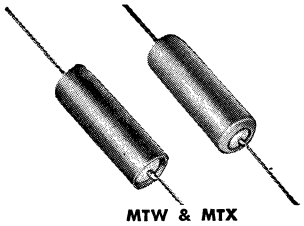
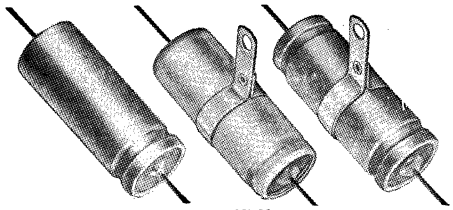
COMPACT METALIZED-PAPER CAPACITORS



MP & MPX



MTW & MTX



MTM

Cornell-Dubilier self-healing, metalized paper capacitors have better electrical characteristics and extra long service life. Units are light and compact.

"PUP" units have bare wire leads securely anchored in metal end-caps, wax-impregnated and dip-sealed against humidity. All units are extended foil—non-inductive wound for low impedance at high frequencies, have high insulation resistance, low power factor and small capacity change with temperature and life.

"METAPUPS" are one piece metal tubular cased, pressure sealed by spin-over on synthetic rubber gaskets.

"SEALPUPS" are a high quality metalized paper capacitor, designed for smallest size and positive seal against moisture. They are hermetically sealed in metal cases with solder-seal glass terminals. Especially recommended in military and commercial equipment where miniature size and light weight are paramount.

TEMPERATURE RANGE: —40°C to +70°C.

HIGH TEMPERATURE Metalized-Paper CAPACITORS

- **POLYKANE-IMPREGNATED:** This impregnant insures excellent electrical properties over long service life.
- **MOISTURE RESISTANT:** MTX tubulars have the finest glass-to-metal solder seal terminals for maximum protection against moisture. MPX tubulars have POLYKANE-impregnated paper tubes, bonded securely to the POLYKANE fill. An external flash wax dip provides an increased moisture seal for extra long storage and service conditions under extremes of humidity.
- **NON-LEAKING:** "POLYKANE" is a solid thermosetting plastic that will not soften, crack, or leak at the maximum temperature. No oil or wax is used internally with these units.

HIGH-STABILITY "SILVER-MIKE"† UNITS

Type 22R *miniature* "Silver-Mike" *capacitors* are especially adapted for use in circuits where accuracy and stability of capacity is of prime importance. Notes On Ordering 5R, 1R, 1DR Units

Standard capacity tolerance is 5% (or within 1 mmfd.—whichever is greater). Also available, on special order, in tolerance ratings of plus or minus 3%, add 10% to list prices, 2% add 15% to list prices and 1% add 25% to list prices. All types can also be supplied in plus or minus 10% and 20% tolerances at lower prices.

Types 1R, 1DR, and 5R "Silver-Mike" capacitors are designed for use in high Q electronic circuits where frequency stability and minimum loss must be maintained. Ideally suited for use in circuits where the LC product must be maintained constant, and particularly adapted for use in tuning IF transformers, tuning circuits and other similar applications.

SIZES: 5R—51/64" x 15/32" x 7/32"
1R—13/16" x 13/16" x ¼"
1DR—13/16" x 13/16" x 5/16"

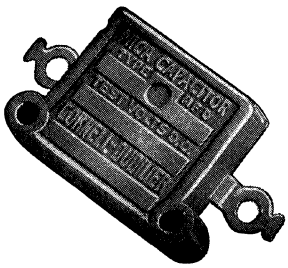
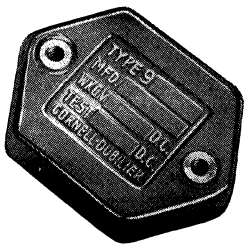
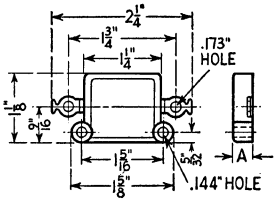
LOW-POWER MOLDED MICA

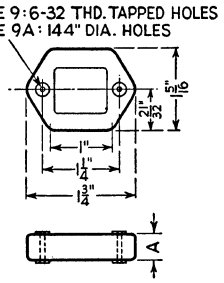


TYPE 4 ★



TYPE 9 ★





C-D types 4 and 9 are designed to meet applications in power amplifiers and low-power transmitters. Principally employed for grid and plate blocking and for r.f. by-pass. **Units are molded in a low-loss bakelite and have a special salt water immersion seal against humidity.**
In the type 9 the two terminals are tapped to receive mounting screws.

STANDARD TOLERANCE: ±10%. Also available on order in plus or minus 5% and 2%.

C-D Ceramic-Cased Capacitors are used in a variety of industrial electronic equipment and high-power transmitters. Built to handle high rf currents and withstand high-voltage stresses with a wide factor of safety. For grid, plate blocking, coupling, tank, and bypass applications—in induction heating, as high-frequency filters to obtain special wave shapes, in Loran circuits. Higher currents and voltages may be obtained with parallel or series combinations by selecting units of the proper capacity and rating, then bolting or strapping the terminal flanges together.

- ♦ CYLINDRICAL WHITE GLAZED, LOW-LOSS CERAMIC CASE

CORNING ELECTRONIC COMPONENTS

The following pages list the resistors, fixed and trimmer capacitors, inductors, and grid boards available from Corning Electronic Components through Corning Distributors. Our electronic components plant in Bradford, Pa., mass produces them all.

Wherever **your** plant is, there is a Corning distributor nearby to give you fast service on the specific components you need to meet your specific requirement. A phone call will put his knowledge at your service.

CORNING FIXED CAPACITORS

Layers of ultra stable ribbon glass and aluminum foil, with leads attached, are fused under heat and pressure to make each Corning capacitor a practically indestructible monolithic unit. Its properties are entirely those of the closely controlled dielectric, and can't be changed by assembly methods or subsequent treatment. Properties like these at 1 Kc and 20°C.; dissipation factor of .05%; dielectric constant of 8.4; temperature coefficient within 10PPM with absolute retrace. Standard values are the same as standard decade values in applicable military specifications.

CORNING RESISTORS

Fuse a tin oxide coating into glass, spiral a helix in the coating, attach leads and you have a simple, rugged, exceptionally reliable resistor. Its temperature coefficient runs from ±0.020% to ±0.05%/°C. Its overload change is less than 1%. Its noise level is less than 0.1 uv/v. It is non-inductive above 280 ohms. Standard values are the same as standard decade values in applicable military specifications.

CORNING ELECTRONIC COMPONENTS

CORNING TRIMMER CAPACITORS

Special metallizing is fired into a special glass of unexcelled dielectric properties, and special hardware is added to produce a Corning trimmer capacitor. This construction provides excellent performance and stability even under conditions of heavy shock and vibration. Our direct traverse PDT and Mini-Trimmer models are unique in design: the core runs up and down its tube without rotating. Tuning curves are smooth – no tuning breakage, backlash, or capacitance reversals. Tuning cores never work loose or become microphonic. Typical values for all our trimmer capacitors are: Q of 500 at 50Mc; temperature coefficient of 50 ± 50 PPM/°C.

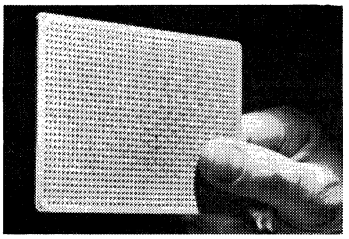
GRID BOARDS

A simple, three-step process converts a Corning FOTOCERAM* grid board into a printed circuit in just 15 minutes. Apply a tape or chemical resist to the copper-plated grid board. Etch away the excess copper. Rinse the board and strip the resist.

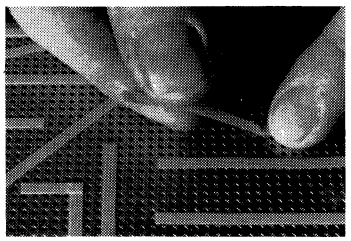
The FOTOCERAM base is a solid piece without laminations which might bend, twist, or warp under high temperatures. Its glass-ceramic composition provides excellent plating, high strength, temperature resistance to 250°C., zero moisture absorption, nonflammability, and rigid dimensional stability.

The board has 0.052 **plated** holes spaced 0.1 inch apart on center. Boards are currently available in two sizes, both 1/16" thick: three by five, and six by eight inches. They can be trimmed to any desired shape with a simple glass cutter.

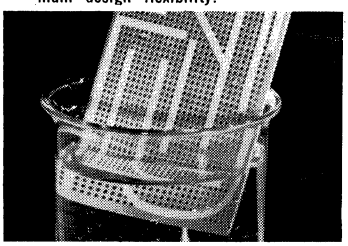
*Trademark



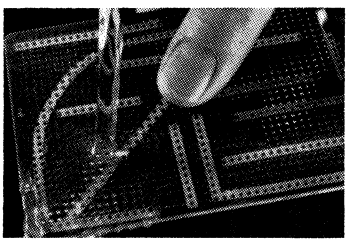
1. New Corning grid boards are already holed and coppered to give you maximum design flexibility.



2. Lay out the circuit run you want on one or both sides with tape or chemical resist.



3. Immerse in a copper etchant to remove excess copper.



4. Rinse. That's all there is to making a board ready for use.

GRID BOARD KITS

These kits include everything needed to build a printed circuit quickly and easily. A complete kit provides FOTOCERAM grid boards, masking tape and a chemical resist ball point pen, etchant chemicals. The kit container itself is used as the etchant solution tray. A second kit version includes everything but the grid boards.

F-C-I POLYSTYRENE CAPACITORS

F-C-I Polystyrene capacitors are characterized by a unique combination of low power factor, high insulation resistance and low dielectric absorption ("soakage") which cannot be duplicated by any other type capacitor except Teflon units. Furthermore, the capacitance stability is excellent, and the temperature coefficient of capacitance is very small. F-C-I Polystyrene capacitors are furnished as standard units in hermetically sealed metal shells; in bathtub cases with low loss steatite terminals; and in style CP70 metal cans with low loss steatite terminals. Special units, including multi-section blocks are also available to order.

TOLERANCES TO .25% AVAILABLE.

F-C-I TEFLON CAPACITORS

F-C-I Teflon capacitors, available in all capacity and voltage ranges, are essentially identical to polystyrene capacitors in their electrical characteristics, with one important difference—Teflon capacitors may be operated at temperatures up to 200°C, whereas polystyrene capacitors have a maximum operating temperature of 85°C. Furthermore, the insulation resistance of Teflon capacitors is many times that of polystyrene at elevated temperatures.

SOLID STATE HIGH VOLTAGE PACKAGED POWER SUPPLIES

Completely enclosed and hermetically sealed power supplies operating on 115 volt, 60 or 400 cycle, AC input. Output ranges from 2,000 vdc to 50,000 vdc. Standard sizes as follows: Non-standard supplies available upon request.

F-C-I HIGH VOLTAGE CAPACITORS

F-C-I Type D-6 capacitors employ a newly developed plastic film, plus Kraft paper dielectric which, with suitable processing, produces capacitors which are better, smaller and cheaper than could ever be produced before. F-C-I Type D-6 capacitors are suitable for practically every type of high voltage D-C application. Type D-6 capacitors can be used up to 125°C with proper derating. With these capacitors available, it is no longer necessary to stock groups of units each outstanding in only one property. F-C-I Type D-6 capacitors are furnished in steatite tubes with hermetically sealed metal end caps and either threaded studs or wire leads. Sizes not listed here can be furnished upon request. Ask for our quotation.

MINIATURE MYLAR® CAPACITORS

HERMETICALLY SEALED — CLOSE TOLERANCE

F-C-I miniature "Mylar" capacitors are furnished in metal shells hermetically sealed with metal-steatite compression type seals. The capacitor elements are non-inductively wound, and wire leads are carefully soldered to the swedged, extended foils to minimize self-inductance, power factor and noise. The Mylar dielectric capacitors are characterized by high insulation resistance (10⁶ megohm-microfarads at 20°C); 0.5% power factor; and a temperature coefficient of +500 PPM/°C.

The capacitors listed above are suitable for continuous operation at 125° C without derating. For 85° C operation. 100 volt series HD capacitors may be operated at 200 volts; 200 volt capacitors at 400 volts; 400 volt capacitors at 600 volts; and 600 volt capacitors at 1000 volts. To correctly designate 85° C capacitors, omit the letter "H" in the part number, and correct the single number standing for the voltage rating.

Prices listed above are for ±5% tolerance. For ±2% tolerance, add 20% and for ±1% tolerance, add 50% to these prices. These capacitors are also available in ceramic shells with epoxy resin end fill. Write for prices.

We are set up to produce these capacitors in any quantity to any odd value of capacitance at close tolerance for manufacturers of filter networks, R-C networks and the like. Write for information.

HIGH CAPACITANCE MYLAR® CAPACITORS

HERMETICALLY SEALED — HIGH INSULATION RESISTANCE

F-C-I Series D-2 capacitors are Mylar dielectric capacitors which possess extremely high insulation resistance, together with good power factor and dielectric absorption. The insulation resistance runs well over 10⁶ megohm-microfarads at room temperature, even for the highest values of capacitance. The power factor and the dielectric absorption are both on the order of 0.5%. These properties make Series D-2 capacitors extremely useful in computers of moderate precision, in timing circuits, and similar types of circuitry. Standard tolerance is ±10%, and closer tolerances are available on order. (Case sizes indicated below are in inches.) (D3 indicates bathtub case and D2 CP70 cases.)

TYPE KM-2 CAPACITORS—85 C OPERATION
WITH SOLDER-SEAL CERAMIC BUSHINGS

F-C-I Type KM-2 series capacitors has been designed specifically to meet the need for smaller, more reliable capacitors that will withstand the severe operating conditions encountered in military and industrial electronic equipment. The dielectric employed is a combination of synthetic polyester film and the finest grade capacitor tissue. Capacitor cases are of CP70 rectangular construction. Units will meet the applicable MIL-C-25C specifications. Solder seal terminals with lugs are used for easy connections and true hermetic sealing. Capacity tolerance is 10%, with an insulation resistance of 20,000 megohm-microfarads. Specify type KMH-2 for operating temperatures up to 125°C. Case sizes for the KMH-2 and engineering data for both series are available upon request. CP07 mounting brackets are available for all sizes.

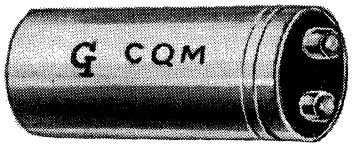
Type CQM Computer Quality Electrolytic Capacitors



Exacting performance of digital computers and related equipment demands components of the highest grade. Type CQM electrolytic capacitors meet these demands. Performance is designed into Type CQM's by the careful selection of materials and the arrangement and processing of these materials so as to obtain the optimum results from their use. Improved internal construction provides for low impedance at high frequencies, and the use of newly developed electrolytes assures superior operation through the operating range of −20°C to +85°C.

Cases are of heavy guage aluminum. A leak proof seal is obtained by rolling the top of the case into a pliable synthetic rubber gasket. Terminals are available in two styles: tapped terminal inserts, for bus bar connections and solder lug terminals for permanent connections. The capacitors are furnished with bare case, one piece vinyl sleeve, or clear rigid plastic sleeve.

Type CQM's are for operation from −20°C to +85°C for periods not exceeding 15% of the total operating time. Units will operate at full rating at ambient temperatures of from−20°C to +65°C. Special design can be furnished to operate at −40°C to +85°C as called for in MIL-C-62 specs.

Glasseal Capacitors For Military and Commercial Application
CPO4 and CPO5 to Mil-C-25C (Inserted Tabs)

G.I. Glasseal capacitors are subminiature metal cased tubular units which have been designed to meet severe and rigid operating requirements, especially where an important design consideration is limited space.

AVAILABLE IN FOLLOWING CASE STYLES:

CP10

CP11

"Glasseals" have proven themselves to be unsurpassed in reliability over the entire operating temp. range from −55° C to + 125° C.

NOTE: The capacitors listed in this table have a capacitance tolerance of ±10%. For ±20% units, change the last letter in the catalog number from K to M.

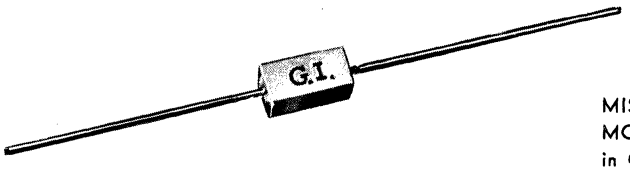
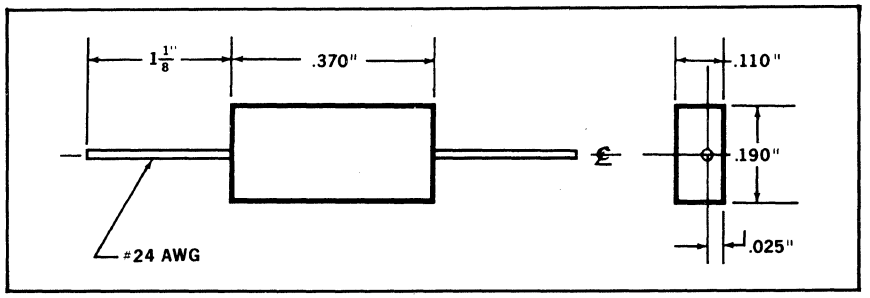
SUBMINIATURE MOLDED MICAS



—55°C TO +125°C OPERATION MEETS & EXCEEDS MIL-C-5B

MISSILMITE subminiature molded mica capacitors are the SMALLEST MOLDED MICA CAPACITORS EVER PRODUCED, and are furnished in Characteristic "C", "D" and "E". MISSILMITES will withstand operating temperatures of —55°C to +125°C (standard ranges is from —55°C to +85°C).



MISSILMITE's reliability and stability permit greater flexibility to the design engineer, and are especially desirable in critical miniaturized assemblies. This subminiature mica capacitor is recommended for use in missiles, delay lines, pulse networks, computors, transistorized assemblies . . . or wherever minimum size and weight, with stability, are required.

NON-STANDARD CAPACITORS

To meet the ever increasing demands for non-standard capacitors, G.I. Capacitor Division stocks large quantities of capacitors not listed. Immediate delivery of almost any non-standard mica capacitor can be made. These capacitors are manufactured to meet or exceed MIL-C-5A specifications.

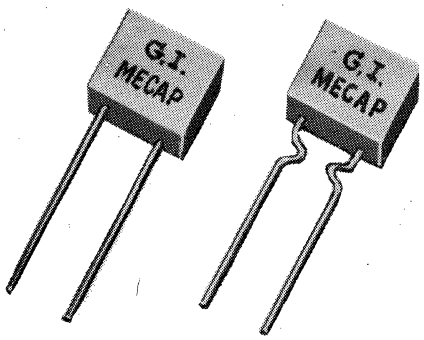
GENERAL INSTRUMENT CAPACITORS

GENERAL INSTRUMENT CAPACITOR DIVISION | **PYRAMID • MICAMOLD**

Molded Radial Lead Mica Capacitors



G.I.'s new "modern designed" MECAPS are the first MOLDED, radial-lead mica capacitors available with precisely controlled body dimensions. Being molded . . . not dipped or encapsulated, each capacitor is exactly the same size, and symmetrical, so units can be conveniently "stacked" in an assembly to reduce component space requirements. MECAPS are available taped for mechanical insertion, and with leads straight or crimped. These MECAPS meet and exceed MIL-C-5B specifications, can be furnished in "B", "C", "D", "E" and "F" characteristics. Operating temperatures from —55°C to 125°C (standard range is from —40°C to 85°C). MECAPS, with their consistently high quality, and many advantages of design, are no more expensive than the obsolete dipped types.

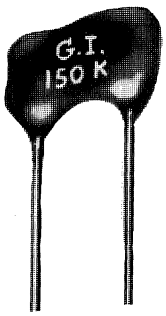
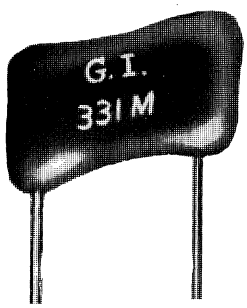
GENERAL INSTRUMENT CAPACITORS

GENERAL INSTRUMENT CAPACITOR DIVISION | **PYRAMID • MICAMOLD**

Encapsulated Mica Capacitors

G.I. Micaps are silvered mica capacitors having the same mica capacitor sections as the molded styles CM-15 and CM-20. They differ in that they are hermetically sealed by a dip coating method and have radial wire leads instead of axial leads. This latter feature results in a shorter RF current path and greater ease of installation, making them specially suitable for use in printed circuitry. Micaps are smaller than the comparable molded types and are particularly applicable in the development of miniature equipment.





TYPE DESIGNATION TO BE IN FOLLOWING FORM:

MQ-15 151 J

STYLE — CAPACITANCE* — TOLERANCE

*The nominal capacitance value expressed in microfarads is identified by a three-digit number; the first two digits represent significant figures and the last digit specifies the number of zeros that follow.

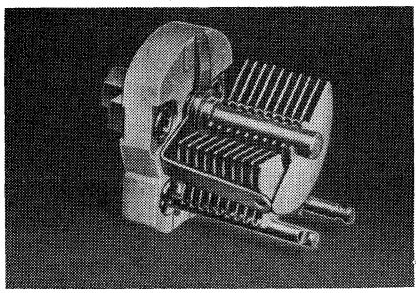
HAMMARLUND

STANDARD VARIABLE CAPACITORS

"APC" CAPACITORS



FEATURES—The "APC" trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

CONSTRUCTION—Brass rotor and stator plates are soldered to brass supports. Nickel-plated phosphor bronze wiper assures positive rotor contact. All metal parts are nickel-plated. Terminals are hot-tin dipped. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding the rotor.

SPECIFICATIONS—Straight line capacity characteristic. Available either with hexagonal collar on slotted shaft to permit rotor adjustments to be made with wrench or screwdriver or with ½" extended shaft for knob control or shaft coupling. (Type "B") "APC-C" Lock Type now also available through distributors. Air Gap is 0.015" nominal. Tested at 600 V. R.M.S., 60 cycles.

Code	Capacity		Plates	Net Price
	Max.	Min.		
APC-15	17.	2.8	5	$1.25

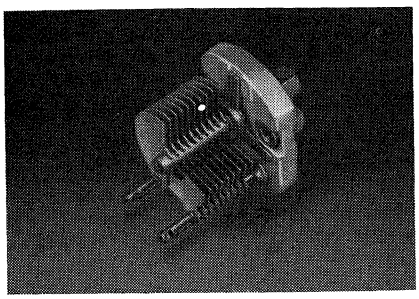
APC-100	100.	5.5	27	1.85
APC-140	140.	6.7	37.	2.15

"B" and "C" types slightly higher

"MAPC" CAPACITORS



FEATURES—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC". Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use.

CONSTRUCTION—The standard "APC" construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated phosphor bronze wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

SPECIFICATIONS—Straight line capacity. Available either with screwdriver or socket wrench adjustment or with 7/16" extended shaft for knob control or shaft coupling. (Type "B") "MAPC-C" Lock Type now also available through distributors. Air Gap is 0.0135" nominal. Tested at 600 V. R.M.S., 60 cycles.

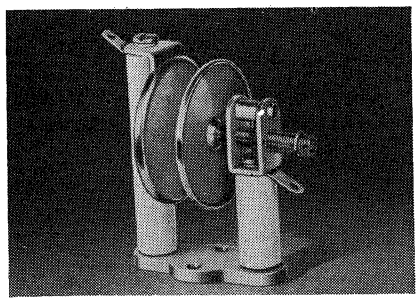
MAPC-140	140.	5.5	52	1.62

"B" and "C" types slightly higher

"NZ-10" CAPACITORS

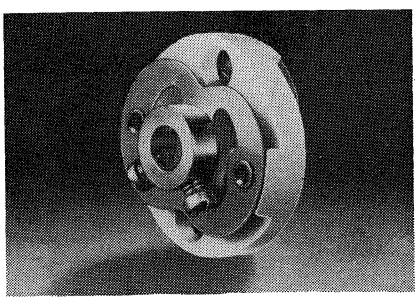


FEATURES—The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shorting of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

SPECIFICATIONS—Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

Net Price $4.77

"FC" and "FNC" COUPLINGS



FEATURES—The "FC-46-S" is an insulated flexible coupling designed to provide for mechanical ganging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flashover voltage is approximately 5000 V. R.M.S. Brass hubs and spring temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform side-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The "FNC-46-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

STANDARD VARIABLE CAPACITORS

"MC", "MCA" and "MCD" CAPACITORS

FEATURES—The "MC" is a versatile single section tuning capacitor designed to give the equipment engineer a choice of mountings, connections and capacity characteristics. The threaded brass front bearing and tapped aluminum end brackets permit panel or base mounting. "MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. Hammarlund "MC" capacitors, except for "MCA" types, have silver plated phosphor bronze wiping contact, silicone-treated steatite insulation, soldered nickel-plated brass rotors and stators, rotor shaft supported on bearings at both front and rear of capacitor.

The "MCD" is a split-stator panel-mounted capacitor with all the "MC" features. Stators have terminals on both sides. Stators on single-spaced capacitors are separated by a shield. Wide-spaced units have no shield. Multi-section capacitors can be designed for special applications.

A rotor stop is available on "MC" capacitors on special order.

SPECIFICATIONS—Straight line or "Midline" capacity characteristic. Single-spaced types have 0.0245" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

"HF" and "HFD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HF" is a single section tuning capacitor employing "APC" rotor and stator design. Extra long sleeve bearing and positive contact nickel-plated phosphor bronze wiper make this unit ideally suited to high frequency applications. Silicone treated steatite insulation. Single hole or base mounting. Special spacing, capacity values, finishes and other modifications are available to manufacturers on special order.

DOUBLE SECTION CAPACITOR — The "HFD" dual capacitors, like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Soldered brass plates are nickel-plated. Aluminum front and rear end panels are mounted on a heavy silicone treated steatite base. Front and rear bearings with wide individual silver plated phosphor bronze wipers for each section assure long life and maximum contact efficiency. Single hole panel mount or base mounting. Electrostatic shield between sections. Terminals are provided on both sides of each stator to permit mounting tube and inductor on opposite sides. Multi-section capacitors can also be made available to customer specifications.

SPECIFICATIONS—Straight line capacity. Single spaced types (HF and HFD) have 0.015" air gap and are tested at 600 V. R.M.S., 60 cycles. Wide spaced types (HF-X and HFD-X) have 0.045" air gap and are tested at 1400 V. R.M.S., 60 cycles.

"HFA", "HFA DIFFERENTIAL", "HFA DUAL", and "HFBD" CAPACITORS

SINGLE SECTION CAPCITORS—The "HFA" is a single section tuning capacitor similar to the "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher breakdown ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug type terminal mounted with the bearing provides an efficient rotor connection.

DIFFERENTIAL TYPE CAPACITORS — The "HFA" type units are now available as standard items in the differential type construction. The unit is mounted with an ungrounded rotor making it suitable for a wide field of application. In addition to the features of the "HFA" the design also incorporates the use of a spring bronze silver plated wiping contact on the rotor.

DOUBLE SECTION CAPACITORS—The "HFAD" and the "HFBD" are dual balanced rotor capacitors employing front and rear panels plus a single ball rear thrust. Both units are applicable to transmitter design. The construction features are similar to the "HFA" and the "HFA Differential" type capacitors. Additional special feature employed on the "HFBD" type incorporates the use of an insulated shaft extension on the rotor to safeguard against shock hazards with the application of high voltages.

SPECIFICATIONS—Straight line capacity. Air gaps and test voltages are as indicated in table. However, "HFBD" breakdown voltages are doubled and capacitance values approximately halved when stator sections are connected in series.

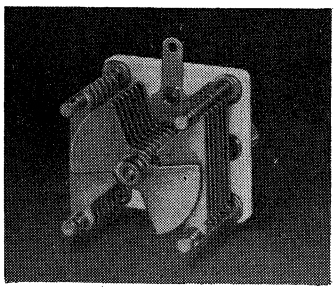
"RMC" CAPACITORS

FEATURES—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver plated phosphor bronze spring wiping against a wide disc on the rotor. The plate shape and other constructional features are the same as on the "MC". Tapped holes in front panel and in mounting feet, as well as additional brackets for inverted mounting permit a wide variety of assembly methods. "M" type plates and ball-bearing construction can also be made available as specials.



"BFC" CAPACITORS

FEATURES — The "BFC" "butterfly" type capacitor has very low minimum capacity, low in inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor connection. For dual split-stator capacitor use, it has a low-loss positive rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance.

CONSTRUCTION — Brass rotors and stators are soldered and nickel-plated. The contact wiper is heavily silver plated phosphor bronze. Tapped studs on the silicone treated steatite front panel permit mounting the capacitor without grounding the rotor. The sleeve type bearing is nickel-plated brass.

SPECIFICATIONS—Straight line capacity. 90° rotation from minimum to maximum capacity position. Air gap is 0.030" nominal. Tested at 1200 V. R.M.S., 60 cycles between rotor and each stator.

"VU" CAPACITORS

FEATURES — The "VU" is a uniquely designed UHF tuning capacitor using completely original concepts. With it, conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal-to-metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to be mounted adjacent to and on opposite sides of the capacitor to minimize circuit inductance. The symmetrical design is ideal for tuned circuits operating up to 500 megacycles.

CONSTRUCTION—Rotors and stators are of brass with plates soldered in precisely located grooves and then silver plated to increase the "Q" of the capacitor. The insulation is silicone treated steatite. All lengthwise frame members are of brass to minimize temperature effects. Base mounting brackets are provided.

SPECIFICATIONS—The capacity characteristic approaches a straight line frequency curve as indicated by nominal values in table at left. Air gap is .0168" nominal. Tested at 700 V. R.M.S., 60 cycles, between rotor and each stator.

"MAC" and "MACBF" CAPACITORS

FEATURES—The "MAC" provides the low minimum capacity essential for use as a trimmer in the VHF range. It was engineered and designed to produce a rugged, stable, highly reliable miniature component for today's equipment.

CONSTRUCTION — Its silicone treated steatite base is only ¾" x ⅝". Rotor and stator are soldered assemblies and are of brass, nickel-plated. Rotor and stator terminals are positioned to permit short leads. The threaded bearing is provided with flat sides to permit single hole mounting.

SPECIFICATIONS—Straight line capacity. Screwdriver adjustment. Air gap is 0.017" nominal and tested at 880 V. R.M.S., 60 cycles, except the MAC-30 which has an air gap of 0.0135" nominal and is tested at 600 V. R.M.S., 60 cycles. "MACBF" is the butterfly version of the "MAC." It is designed for dual split-stator capacitor use.

FP-WP Series

FP AND WP CAPACITORS

For top chassis mounting in filter and audio bypass circuits and TV applications. Extremely dependable under heavy ripple current and high surge voltage. All WP and FP capacitors are designed for high temperature (85° C) operation at full rated voltage, except as noted in table by (‡). Single, dual, triple and quad section units encased in compact rubber sealed aluminum cases with self-contained mounting feature.

Type FP is supplied with Fabricated Plate (metallized cotton gauze) anodes, **Type WP** with etched plate anodes. Special internal design provides low RF impedance and minimum coupling between sections. Case at negative potential. Supplied insulating washer may be used where negative ground is not wanted. For twist-prong mounting through chassis slots. ***SIZES are shown at end of listing.**

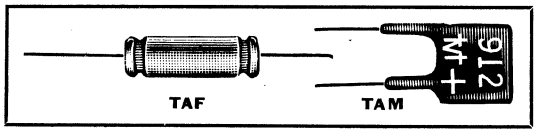
MALLORY TANTALUM CAPACITORS

P. R. MALLORY & CO. INC.
INDIANAPOLIS , IND.



Mallory offers the industry's best selection of tantalum capacitors in three general types: Sintered anode wet slug; sintered anode solid electrolyte; and, foil. Standard temperature range, −55° C to +85° C, with some types offering +200° C operation. **Catalog System:** New 13-digit system is used to specify Mallory tantalum capacitors. Each number is significant and completely identifies the item. The first three digits indicate type (TAF, TAP, etc.). Capacity is shown in μμf with fourth and fifth digits showing significant number and sixth digit showing numbers of zeros. Tolerance is indicated by the seventh digit. Digits eight, nine and ten show WVDC at +85° C. Eleventh digit indicates polarity; twelfth, insulation; and thirteenth, case size or configuration. Thus TAF504M150P0A is: TAF type, 0.5 μf, ±20% tolerance, 150 WVDC, polarized, uninsulated, case size A. Please refer to bulletins shown for exact details. **Note:** Standard ratings available from distributor stock are shown in following tables. Other ratings available from factory stock.

*For un-insulated unit, insert "4" after "CL4_" or after "CL6_"; for insulated unit insert "5" instead. Also insert "S" or "T" before "_P3" to indicate tolerance except for high-capacitance (‡) units, see footnote ‡. "S" tolerance is −15+20%; "T" tolerance is −15+50%.
‡High-capacitance series. Available only in "M" tolerance, ±20%.
§Tolerances as shown by suffix letter (S or M—see above notes). For insulating sleeve, add "A."

Dual Section Electrolytics — Type "IL"

Hermetically sealed in aluminum tubes with completely flexible leads. U/L Approved, plastic coated leads are rivetted directly to the condenser end disc, eliminating the use of rigid terminal risers, allowing capacitor to fit into smaller space and eliminating lead breakage. IL capacitors have wrap around mounting strap and are common negative, guaranteed for one year.

"ROCKETTES"

Planet ROCKETTES are impregnated and jacketed with a HARD-as-ROCK plastic which will not dry out, shrink away from the leads nor develop fissures nor cracks, thus guaranteeing against the entrance of moisture and guaranteeing good shelf life and long service life. The coiled heads of the leads are securely soldered to the foil, which is imbedded in the same plastic used as an impregnant, making it impossible for them to work loose or pull out. ROCKETTES have exceptionally high insulation resistance which is maintained proportionately over the entire temperature range of —30° to +85° C.

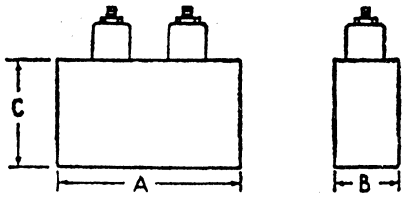
New TYPE LK New
DC FILTER CAPACITORS



Type LK capacitors are an entirely new design which have been proved by rigorous testing in the laboratory and by usage in the field for several years. This is the first listing to be published.

Type LK capacitors are smaller and have a reliability factor which is unexcelled. Their primary usage is for DC filtering and DC blocking applications.

Temperature Range is minus 65°C to 105°C. With full rated voltage from −65°C to 85°C.

Life 2500 hours at rated voltage at 85°C.

Case is the CP70 style terne plate metal, primed and finished with a synthetic enamel.

ENVIRONMENTAL and other testing may be performed per MIL-C-25A, Characteristic E. Type LK exceeds the best characteristics of paper capacitors in a much smaller size. Comparison of sizes will show that the volume is much less than required for MIL-C-25A equivalents in Characteristic F and are better than characteristic E quality.

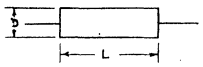
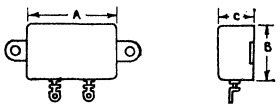
TYPE AM LISTING

METALLIZED MYLAR* has several advantages that are outstanding. The self-healing characteristics are well-known and extend the useful life of the capacitor. The second, and most over-looked feature, is the possibility of making full use of the highest volts-per-mil rating of the film by eliminating all the weak dielectric areas. This results in extra small size without sacrificing life, reliability and economy.



Sizes and net prices are given for the floating case style and 20% capacitance tolerance. Each part number shown should be ordered with the suffix "BW 20" added. Other styles and tolerances are also available.

BATH TUB CONTAINER



TYPE AB Capacitors are metallized Mylar* elements hermetically sealed in a bathtub style container. The self-healing and clearing characteristics make possible the smallest high quality capacitor for the given rating.

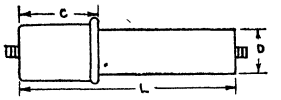
TYPE OT – TUBULAR TO 120KV



TYPE OT capacitors are designed for long life at high voltage in the medium temperature range. Type OT capacitors are the smallest and most economical capacitors available for high voltage DC filtering.

CASE is hermetically sealed and designed for operation under oil. Many of the lower voltage units may be operated in air. Many capacitance values at stated voltages are available in two physical sizes, providing the design engineer flexibility in placement of parts and circuit wiring.

MOUNTING. Must be mounted vertically, corona cap at top.

TEMPERATURE RANGE. Type OT capacitors will give long life in the temperature range of −40°C to 55°C with the rated voltage applied.

TERMINALS and mounting studs are axial 3/8-16x3/4" long.

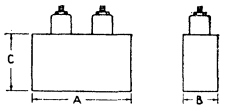
TYPE EP



TYPE EP capacitors are designed for commercial service. Economy and reliability were the determination factors for the resulting physical construction and electrical characteristics.

TEMPERATURE RANGE is minus 60°C to 85°C. Full nameplate voltage rating applies in the temperature range from minus 50°C to plus 60°C.

LIFE CHARACTERISTICS At full nameplate DC voltage in the temperature range of minus 50°C to plus 60°C mean life is 10,000 hours of operation. For temperatures above 60°C to 85°C derate the operating voltage according to the derating curve to maintain the 10,000 hour life expectancy. For increased life at any temperature range voltage derating to 87% will double and derating to 75% will quadruple life expectancy.

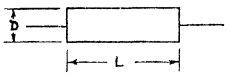
TYPE PM



TYPE PM polystyrene dielectric capacitors are hermetically sealed tubular capacitors with tinned copper wire axial leads. Sizes and net prices are given for the floating case style and 20% capacitance tolerance. Each part number shown should be ordered with the suffix "BW 20" added. Other styles and tolerances are also available.

ADJUSTABLE TYPE PW

TYPE PW capacitors are adjustable hermetically sealed polystyrene capacitors in bathtub cases. The construction permits an external adjustment to be made to control the capacitance in a range of plus and minus 1% of the nominal capacitance. Terminals are solder lugs mounted on glass solder-seal bushings. Extended foil (non-inductive) construction is used.

APPLICATIONS: Type PW capacitors are especially suited to applications using LC or RC networks. Since the capacitor is adjustable over a 2% range of nominal capacitance, "on the button" frequency or tuning characteristics is easily attained. The adjustability feature permits compensating for other components which are not exactly nominal. The low power factor and dielectric absorption assure very little distortion of the AC wave, even at very low frequencies.

RF AND PULSE GLASS CAPS The plastic films used in the manufacture of RF and PULSE GLASS CAPS have very low losses. These capacitors will handle large peak currents such as encountered in a 25 ohm type E plus forming network charged to the peak pulse voltage at a repetition rate of 1000 PPS.

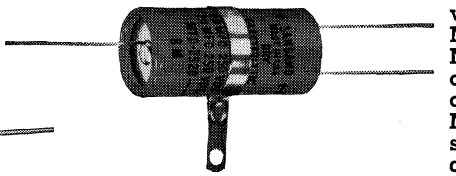
TYPE MT

TYPE MMT



TYPE MTD

SANGAMO Types MT, MTD and MMT are specially designed for radio and television applications and other electronic equipment operating at temperatures up to 85°C. They are encased in drawn aluminum containers with cardboard insulating sleeves on which polarity is clearly marked. The Type MMT, which is a miniature version of the MT, is ideally suited to meet the precise operating requirements of low voltage circuits. Because of their small physical size the MMT and MT, up to ¾" diameter, are self-supported by means of reinforced bare tinned copper wire leads. The MT and MTD units are provided with mounting straps in ⅞" and 1" diameters.

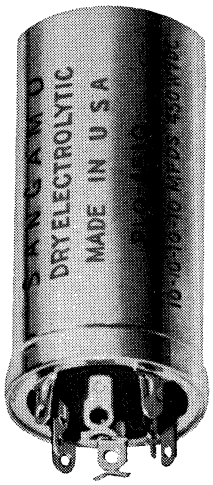
Type PL and Type PLP Electrolytic



TYPE PL
For Twist Tab Mounting

The Sangamo Types PL and PLP, "Twist Tab", electrolytic capacitors are specially designed for television and electronic applications requiring long life and dependable performance at 85°C. They are sealed in round aluminum cans with the element tabs securely clamped and staked to the terminal lugs, thus insuring permanent, low resistance connections. In all cases the aluminum can and mounting ring are negative. Because of the rigid replacement applications found in most television receivers, all units are manufactured to satisfy conditions of high ripple currents and high surge voltages in Selenium Rectifier Circuits.

The Type PLP has a combination base allowing interchangeable use for mounting in printed circuit boards and also for conventional twist tab mounting.

The listing in this catalog includes over 300 new values to give more complete coverage of combination capacitances and higher voltages. The new numbering system combines the type designation with the former stock numbering system. "Old PL Numbers" are to be used for reference purposes only and will be discontinued at a later date.

SANGAMO Electric Company capacitors Springfield, Illinois

GENERAL SPECIFICATIONS FOR MICA CAPACITORS

Mica capacitors have been continuously manufactured and improved by Sangamo for over 35 years. The quality of Sangamo mica capacitor is the result of long experience in the selection of superior grades of India ruby mica, and know-how in the formulation and selection of unique enclosing materials such as molding compounds. Our laboratory and manufacturing facilities are equipped with specialized and modern equipment and are staffed to provide constant attention to continuing development of quality and customer service. All Sangamo micas are designed to exceed the performance requirements of applicable Military Specifications such as Mil-C-5B and Mil-C-10950B.

NOTE: In line with industry standardization, the use of pf in place of mmf is used in this catalog.

MARKING

Sangamo wire lead mica capacitors can be marked by either ink stamping or color coding. Ink stamping can be supplied to the Sangamo identification or the Military designation, both of which are defined below. Color coding can be supplied for Mil-C-5 or E. I. A. Other ink stampings and color codes are available on request.

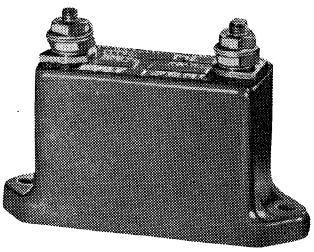
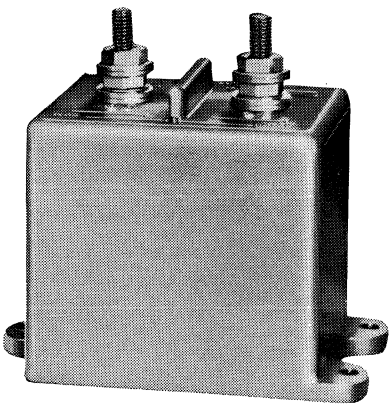
Types F1-F2 MICA Type F3





Types F1, F2, and F3 capacitors, the smallest of the Sangamo line of transmitting types, possess a range of voltage and current ratings suitable for many applications. They are housed in low loss molded bakelite cases. The mica and foil sections are permanently clamped, vacuum impregnated, and installed in the case in such a manner as to provide stable characteristics and adequate moisture proofing.

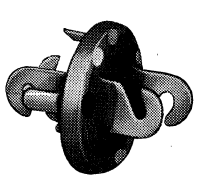
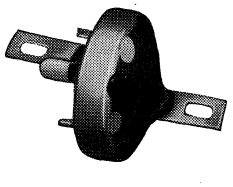
SANGAMO Electric Company capacitors Springfield, Illinois

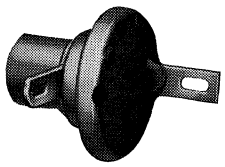
Type M BUTTON® CAPACITORS (Silvered Mica)



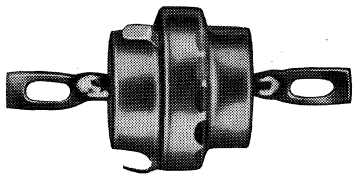
M63



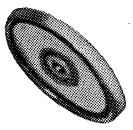
M23



M72



MHC519



M100

Small and light in weight **SANGAMO** Type **M** Silvered Mica Button Capacitors are designed particularly for application in high frequency circuits. Their high "Q" is indicative of their low loss. These units meet all requirements for **V.H.F.** and **U.H.F.** applications and are constructed to be electrically and mechanically stable.

The silver plated case design performs the dual purpose of shielding and being the low potential terminal. The high potential terminal through the center of the Capacitor allows 360 degrees electrical current distribution, resulting in extremely low series inductance and more efficient performance in high frequency applications.

All units are normally furnished in characteristic "E" and in 500 working volts **D.C.** Case sizes are in accordance with **Mil-C-10950B** as general types **CB11, CB21, CB75** and **CB76.** The types **MHC** are hermetically sealed and will far exceed the environmental requirements of **Mil-C-10950B.** For more complete engineering information write for Catalog **2311A.**

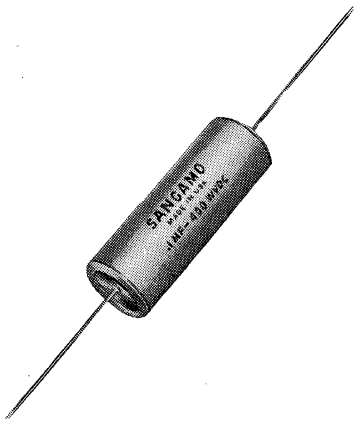
SANGAMO capacitors Electric Company Springfield, Illinois



Type S *Subminiature hermetically sealed metal tubular paper dielectric capacitors*

SANGAMO Types **SBA** and **SDA** are designed to meet the demands for a subminiaturized, high quality, hermetically sealed paper tubular capacitor. These units are encased in brass tubular cases finished with a high tin content alloy. Hermetic sealing is accomplished by using glass-to-metal, solder-seal terminals. The impregnant used in the Type **SBA** and Type **SDA** is Etherm—an impregnating oil of high thermal stability and superior electrical characteristics over the temperature range of −55°C to +125°C. Both types are supplied with the case floating (circuit o——| |——o) and without an insulating sleeve. The Type **S** capacitor is available in many other designs. For more detailed information write for Catalog 2421 or Catalog 2422 type **SM**, High Reliability. Case sizes are in accordance with Mil-C-25-C specification, types CP04 and CP08.

Type 71 PAPER

SANGAMO Type 71 paper dielectric capacitors are impregnated with Diaclor—a specially compounded, chemically pure, chlorinated dielectric oil. SANGAMO Diaclor is a synthetic impregnant whose characteristics can be controlled with great uniformity and possesses a high dielectric constant, high resistivity, low power factor, high dielectric strength and is non-flammable and non-explosive. The Type 71 is an excellent choice in medium and high voltage circuits where light weight per unit volume is an important factor. Each unit is finished with grey lacquer paint over a zinc chromate under coat. All units are built in accordance with applicable paragraphs of Specification Mil-C-25C. All units are designed in accordance with Mil-C-25C.

Type 33M MOLDED MYLAR TUBULAR CAPACITORS

The Sangamo Type 33M, which uses a Mylar® di-electric is molded in thermosetting plastic to provide more stable capacitance values, high moisture resistance, excellent seal and operation up to 125°C when the voltage is derated to 50% of the 85°C value.

They are especially recommended for use in test equipment, instrumentation and filter networks all of which require small physical size and dependability under extreme heat, humidity and physical stress. The type 33M is manufactured to meet moisture requirements of Mil-C-91A Specifications.

PHOTOFLASH ELECTROLYTICS and ACCESSORIES

Build your own Electronic Flash!

Now you can build up-to-the-minute electronic photoflash units using the very latest low voltage circuits. These units are comparable to commercially manufactured gear in size, weight, and efficiency, yet can be built for considerably less than ready-made units. Your electronic flash eliminates flash bulb costs, too, and it stops action with better results. Sprague Booklet C-703 gives you step-by-step instructions for building four different models. Every detail is clearly illustrated and explained, making it easy to put one together in several hours. Photoflash accessories, listed below, are fully described and illustrated in this invaluable guide. These special items, plus a few standard parts and miscellaneous material, are all you need to build this outfit.

SPRAGUE CAPACITORS

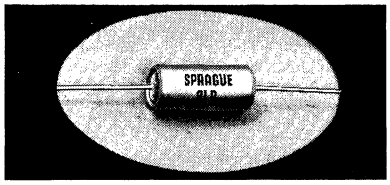
VITAMIN Q® SUBMINIATURE PAPER CAPACITORS



These capacitors are the most widely used of all paper capacitors in commercial and military electronic equipment. Hermetically sealed in metal cases, they are electrically and mechanically designed to meet stringent operating requirements.

Impregnated with Vitamin Q, a substantially linear, controlled molecular weight, hydrocarbon polymer, which is exclusive with Sprague, these dependable capacitors are available for operation in two temperature ranges: −55°C to +85°C and −55°C to +125°C. Because of their Vitamin Q impregnation, these subminiature capacitors have a higher insulation resistance and longer life than comparable units with ordinary oils.

Sprague Subminiature paper capacitors exceed the performance requirements of military specification MIL-C-25A. A limited number of the ratings shown here are listed in the military specification and should be ordered by their MIL type designation where equipment specifications so require. (See page after next.)

Listed below are the most popular insulated section (ungrounded case) capacitors. For technical data on these and other types, ratings, and tolerances, as well as on wax-impregnated units for absolute minimum size, refer to the latest issue of Engineering Bulletin 2110.

For prices on quantities from 10 to 499, see your Sprague Industrial Distributor.

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors have not been recommended for low-voltage applications (e.g., below 10 volts) but recent improvements in design now make it possible to recommend them for operation at all voltages from 1 to rated, in nearly all applications.

From the application standpoint, the principal difference between the two construction types is that, at resonance, losses are likely to be lower in the extended foil type. This is because the resistive component of impedance is likely to be higher at resonance in the inserted tab type of construction. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab construction is recommended, primarily because of the smaller size of the capacitor roll.

SPRAGUE CAPACITORS

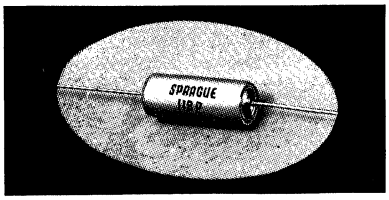
118P DIFILM® METALLIZED CAPACITORS



- The best of their type which it is possible to produce in the present state of the art
- Rated for operation at 125°C WITHOUT VOLTAGE DERATING
- Unique dual dielectric — a combination of metallized paper and of polyester film, impregnated with special high-temperature mineral wax
- Subjected to stringent quality control during manufacture
- Higher insulation resistance than any other metallized paper capacitors — at 125°C, minimum product of insulation resistance and capacitance is 10 megohm-microfarads for 200 V units or 40 megohm-microfarads for 400 and 600 V units
- Capacitor sections are effectively of non-inductive construction, resulting in capacitors unmatched in performance quality by any other metallized capacitors
- Hermetically sealed, with glass-to-metal solder-seal terminals
- Have unusual self-healing characteristics, in the rare event of capacitor dielectric breakdown
- May be used at extremely low voltages where metallized paper construction has previously been unsatisfactory
- For complete performance characteristics, see latest issue of Engineering Bulletin 2211
- For units with outer plastic insulating sleeves, change last digit of cat. no. from 2 to 4 and add $.075 to price.

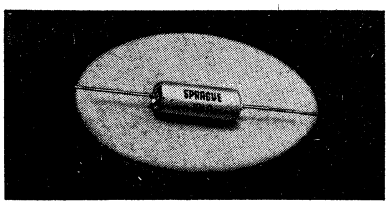
SPRAGUE CAPACITORS

121P METALLIZED PAPER CAPACITORS

- Designed to operate at 125°C WITHOUT VOLTAGE DERATING — extremely important in military and industrial equipment where higher temperatures are encountered.
- Quality of these capacitors is surpassed only by Type 118P units described on opposite page.
- High insulation resistance — at 85°C, minimum product of insulation resistance and capacitance is 20 megohm-microfarads. At 125°C, minimum product is 1.0 megohm-microfarads.
- Hermetically sealed with glass-to-metal solder-seal terminals — capacitor cases are of corrosion resistant materials — similar in appearance to Type 118P.
- May be operated at low voltages, unlike many other metallized capacitors.
- For complete performance data, see latest issue of Engineering Bulletin 2210.
- Capacitors listed below are ungrounded case (insulated section) units without outer insulating sleeves. For information on other styles consult your Sprague Industrial Distributor.
- For prices on quantities from 25 to 999 pieces, see your Sprague Industrial Distributor.



- For units with outer plastic insulating sleeve, change last digit in cat. no. from 2 to 4 and add $.075 to price.

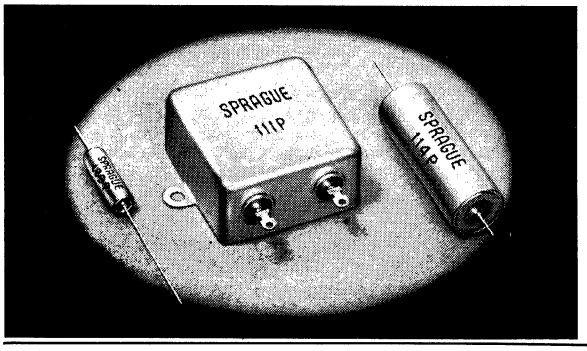
SPRAGUE CAPACITORS



METAL-CLAD FILM CAPACITORS

Polystyrene film dielectric capacitors have the lowest dielectric absorption of all film capacitors. The exceptionally high insulation resistance will generally exceed 10,000,000 megohm-microfarads. They have extremely low power factor, close capacitance tolerance, high capacitance stability with temperature change and high operating temperatures. The unusual properties of these capacitors make them particularly suitable for circuit applications demanding such characteristics. All capacitors listed here are hermetically sealed in metal cases.

114P STYRACON® TUBULARS

Specially processed polystyrene film dielectric ● Operating temperature range, —55°C to +85°C ● High insulation resistance ● Low dielectric absorption (under .05%) ● High capacitance stability (less than ±.2% drift) ● Extremely low power factor (high Q) ● Units listed below have capacitance tolerance of ±5%. For ±20%, change 8th digit in catalog number from 5 to 0; for ±10% change to 9; for ±2% change to 2; for ±1% change to 1 ● Units listed below have plastic insulating sleeves. For plain metal case, change last digit in catalog number from 4 to 2 ● For complete technical data, refer to latest issue of Engineering Bulletin 2510 ● Prices available upon request.

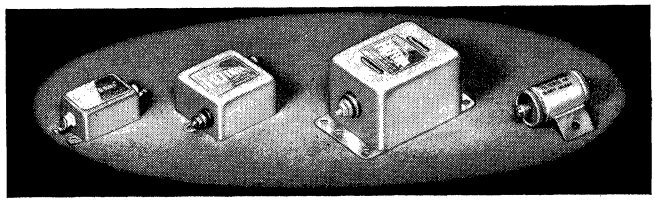
FILTEROL® FILTERS



FILTEROL 1 FILTEROL 2 FILTEROL 3 FILTEROL 4

Filterol Types 1, 2, and 3 — Designed for connection in series with power supply lines to interference-producing devices . . . A 3-terminal network with the case as one terminal . . . The selected filter should have a rating higher than the continuous operating current of the offending device . . . A single Filterol connected to the high side of the line is usually sufficient . . . In severe cases a Filterol in each leg of the power line may be necessary . . . For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4 — A new, exclusive Sprague development incorporating a Sprague HYPASS® Capacitor . . . Provides exceptionally high attenuation at frequencies above 5 megacycles . . . Intended for small devices with continuous current ratings up to 20 amperes.

SPRAGUE PRINTED CIRCUITS

BULPLATE® and MULTI-COMP® PRINTED CIRCUITS

- Bulplates (rectangular plates) and Multi-comps (circular discs) are especially designed to save space and reduce assembly time
- Combinations of resistors and capacitors of maximum compactness
- Integral connections are "printed" and brought out to external leads which are anchored to the basic ceramic plate
- Completed units are protected by a tough moisture-proof coating
- Maximum voltage to be applied across these units is 250 volts d-c, except on D-1 which is rated at 100 volts d-c
- Types V-14 and V-15 are Multi-comp disc-type units — All others are Bulplate rectangular plates

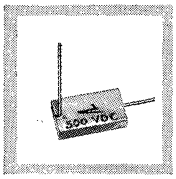
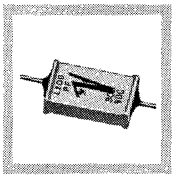
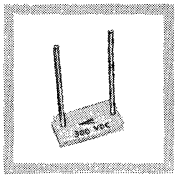
Conforms with MIL-C-11272B



AXIAL-RADIAL
VY 12

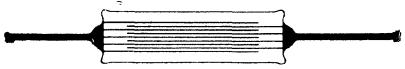


AXIAL
VY 17



RADIAL
VY 04

The superior electrical and mechanical characteristics exhibited by Vitramon® capacitors are attributes of their solid state composition — fine silver electrodes molecularly fused within a solid block of high grade porcelain, forming a monolithic unit that requires no case or hermetic seal.



"Layering" of electrodes makes possible a much greater active dielectric area within the same cubic content. Perfect bonding of materials minimizes loss and noise and results in greater stability over a temperature range of —55°C to 200°C.

Vitramon® capacitors are used extensively in guided missiles, jet ignition, proximity fuses, and in radar, servo, guidance, fire control, telemetering, and carrier telephone systems.

HIGH RELIABILITY SPECIFICATION S-1002

Every VITRAMON® Capacitor purchased against our High Reliability Specification S-1002 is accompanied by a detailed documentation verifying a reliability of better than 0.5% per 1000 hours. Continuous control testing of in-process material for all parameters, including 300,000 unit hours of life tests every six weeks, has consistently demonstrated an A.Q.L. for VITRAMON® Capacitors 12 times higher than Mil Specifications.

GENERAL CHARACTERISTICS

Temperature Co-efficient: Maximum deviation from 25°C measurement over range of —55°C to +150°C is ± 15%.

Voltage Co-efficient: Negative at the average rate of 0.025% per volt above 25 vdc for values through 680 mmf, and 0.1% per volt above 680 mmf.

Insulation Resistance: Minimum of 1,000 ohmfarads (100,000 megohms) at 25°C and 10 ohmfarads (1,000 megohms) at 150°C.

Dissipation Factor (at 1 kc): Less than 1.5% at 25°C and less than 1.0% at 150°C through 680 mmf; from 820 through 10,000 mmf, DF is less than 2.5% and 1.5% respectively.

Lead Strength: Withstands a force of five pounds exerted in the direction of the leads as required by MIL-C-11015B.

Dip-soldering: All units thermal shock proofed, may be dip-soldered up to the case at 600°F.

Dielectric Strength: A potential of 400% of rated voltage may be applied for 10 seconds at 25°C.

CRAMOLIN®

A NEW CONCEPT ON IMPROVING CONTACT PERFORMANCE

. . . *and here are* 14 REASONS WHY . . .

1. Reduces contact resistances to their minimum values.
2. Reduces sparking of brushes on commutators.
3. Improves performance of contacts and collector rings.
4. Protects against salt air and sulfidic atmosphere and will not absorb moisture.
5. Applied on moving parts, Cramolin will stay on. Cramolin contains a chemical compound which is strongly attracted by metal surfaces and cannot be removed completely, even by high pressure friction.
6. Fungus growth will not develop on Cramolin-films, because Cramolin contains mineral and synthetic ingredients only.
7. Cramolin is not aggressive on baked varnishes, although it may affect some nitro-cellulose lacquers.
8. Max. effective operating temperature range is —34°C to +150°C (these are conservative values, consult us for higher ranges.)
9. Cramolin can be safely used at a relative humidity of 95% and temperatures up to 100°C.
10. Cramolin will perform equally as well under air pressure as well as in a vacuum.
11. Insulation resistance of 10^{13} ohms between contacts at distance of 1 cm on Trolitul (phenol-formaldehyde resin).
12. Tests have indicated that no injurious secondary effects arise.
13. Cramolin may be applied on old contacts without special precautions. All non-metallic layers, dust, resin, etc., will be dissolved and removed at once by rubbing it off, or by operating the contact several times.
14. Under general operating conditions Cramolin should be reapplied after two to three years (on high frequency and low current contacts). In highly corrosive atmosphere (containing acid, sulphide, etc.) reapplication should take place after one year. If the air contains unusual quantities of ammonia, contacts should be cleaned with our modified Cramolin.

ERSA-MINIATURE SOLDERING IRON

A NEW STREAMLINED LOW TENSION SOLDERING IRON

The power supply for this low voltage (6 volts) iron may come from a battery or a special low voltage transformer.
The ERSA MINIATURE with its 5 foot, light-weight, twin-cable, securely molded to the plastic handle and plug, weighs only 3 ounces.
The streamlined handle rests comfortably, like a fountain pen, in the hand and permits tireless operation in production work. The slim shaped heating units of 10, 20 or 30 watts may be interchanged in the same handle, in a matter of seconds to the desired wattage. Heating units are screwed into the handle as easily as one would insert a bulb into a flashlight. This method guarantees reliable and continuous contact performance. The soldering tips are simply pushed on the heating unit, and can just as easily be removed.
A heat-up period of 40 seconds is sufficient to make the ERSA MINIATURE ready for use and has built-in protection against capacitative stray effects from mains which could damage transistors or endanger the operator.
The specially designed Control Transformer Models R10 and R30 will solve the most complicated soldering problems. Both transformer models have a primary voltage regulator for 110, 125, 150, 220 and 240 volts. The secondary voltage is also variable within the range of 5 to 7 volts, thus making it possible to select a temperature range between 300 to 500°C. When not in use, the ERSA MINIATURE iron rests on a special nozzle provided on the transformer. This protects against overheating.
Control Transformer R10 was solely made for use with the ERSA MINIATURE Iron Model 10W. The R30, with a greater output, permits universal use of all the various ERSA MINIATURE irons with their different capacities. Several ERSA MINIATURE irons may be hooked up to total 30 watts.

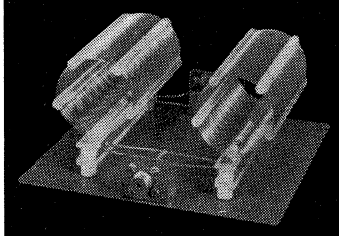
AIR WOUND COILS

Illumitronic Engineering has developed a complete, versatile series of air core inductors designed especially for the amateur rig, or for prototypes of RF transmission equipment. These coils may be used for pi output circuits, conventional LC output circuits, interstage and oscillator circuits. The series consists of a standard coil type, a variable pitch type, and an indented type, in a range of diameters from ½ inch to 3 inches. All Air Dux® coils are constructed of tinned (silver or formvar) copper wire wound on large low loss polystyrene rods for the highest mechanical strength and lowest electrical losses.



air dux® BALUN

Unbalanced coax lines used on most transmitters can be matched to balanced lines of either 75 or 300 ohms impedance by using the B2009 air dux coils. May be used with transmitters and receivers without adjustment over the frequency range of 80 through 10 meters, and will handle power inputs up to 200 watts.

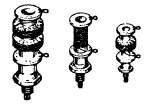
Industrial Adjustable R.F. Coils

Ceramic Adjustable R.F. Coils



The forms used in this series feature terminal rings machined from the ceramic form material. Coils wound on these forms exhibit high Q and good stability. The adjusting core is held rigidly at any setting through the use of a newly designed tension device on the bushing.

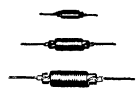
Frequency Selective R.F. Chokes



Designed for maximum efficiency and highest impedance at specific operating frequencies this group of R.F. chokes eliminates the designers task of attempting to choose the best coil for a particular application from miscellaneous and often insufficient design data. Designed to cover the major Amateur, Industrial, and Citizens bands the coils will also operate efficiently at frequencies approximating the recommended frequencies.

Radio Frequency Chokes

R.F. Chokes with Axial Leads

These chokes cover an inductance range from .1 microhenry to 10 millihenries in 5 decades with 8 coils per decade. Inductance values increase in steps of approximately 50%. Either single layer or 3-pi universal windings are used to insure low distributed capacity. Chokes are wound on low-loss molded phenolic or powdered iron core forms and are impregnated with a moisture- and fungus-resistant varnish. The type of powdered iron used allows the chokes to operate at all frequencies up into the ultra-high frequency region.

Dimensions: Phenolic form 3/16" diameter x 3/4" long. Iron core form 3/32" diameter x 7/8" long. Leads are 1½" long. Inductance tolerance: plus or minus 5%.

CHOKES AND ELASTICABLE

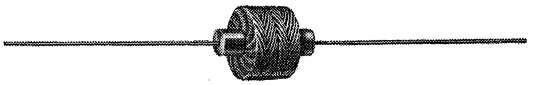
NATIONAL RADIO COMPANY, INC.
MELROSE 76, MASS.
A WHOLLY OWNED SUBSIDIARY OF NATIONAL COMPANY, INC.

CHOKES, COILS AND FILTERS

R-45 SERIES

The R-45 series is a new family of ferrite bead chokes designed for use as filament chokes, parasitic suppressors, and series elements of low-pass filters for frequencies from 5 to 200 mc. They are insulated with an impregnated fiberglass sleeving. The chokes will handle 2 amperes of filament current with a voltage drop of less than 0.02 volts. Performance will be unaffected by extremes of humidity and temperatures up to the Curie point of 125°C.

R-40 SERIES



These ferrite-core chokes have extremely high Q for small size. They are primarily intended for use in networks and filters at frequencies from 50 kc to 1500 kc. Additional uses include application as resonant elements in IF or RF circuits. Fungus-proof varnish impregnation per MIL-V-173A specification provides maximum protection against tropical conditions. Temperature coefficient is less than 550 ppm per degree C for coils with inductance value of less than 1 mh, and less than 250 ppm per degree C for coils with an inductance value of 1 mh or larger.

R-25 SERIES

These MIL-inductance chokes can be used in high frequency circuits, and as filament chokes and peaking coils. Inductance values are in accordance with MIL-C15305A. Chokes from 1.1 uh to 15.0 uh have phenolic forms per MIL-P-14; chokes from 20.0 uh to 120.0 uh have powdered-iron forms. Windings are impregnated with fungus-resistant varnish per MIL-V-173A. Inductance values are stamped in blue on white vinyl sleeve.

R-33, R-50, AND R-60 SERIES

These RF coils are wound on molded phenolic forms per MIL-P-14 and coated with a tough, fungus-resistant varnish. The R50-10 choke is wound on a powdered-iron coil form instead of phenolic.

R-33 (medium current capacity, pie wound)
R-50 (low current capacity, pie wound)
R-60 (high current capacity, lateral layer wound)

R-45 EPOXY ENCAPSULATED

R-45 Epoxy Encapsulated choke series . . . completely waterproof, will meet many MIL type requirements. At 5 megacycles will cover values of .32 uh, .65 uh, 1.0 uh and 1.3 uh. Different values depend on frequencies used. Request specific specification sheet.

Note: Very shortly all chokes in the National family of chokes will be available in encapsulated form.

National features a full line of stock choke items and will wind chokes to your specifications on any standard form. The National Radio Co. engineering department is prepared to quote on your custom filter requirements.

ELASTICABLE STRETCHES UP TO 3 TIMES ITS RELAXED LENGTH

An elastic type wire, made in single and multiple conductors. It will stretch up to three times its relaxed length with stable electrical properties. This unique elastic characteristic in a straight (not coiled or spring loaded) extra flexible wire gives the designer a new material to further design concepts and assist him in solving previously impossible design problems. Three commercial and two military types are available as stock items. These types can be varied to meet a variety of custom requirements.

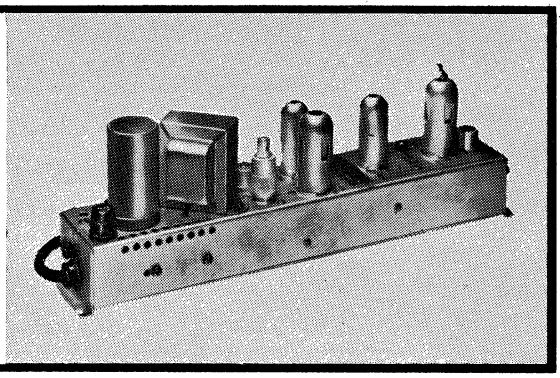
MASTER ANTENNA SYSTEM COMPONENTS

for motels, hotels, apartment houses, schools, etc.

VHF SINGLE-CHANNEL AMPLIFIER WITH AGC

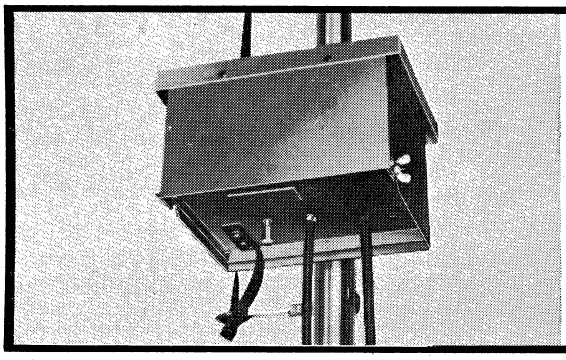


MODEL MCSc—An MCSc is available for each VHF channel and the MCSc-FM covers the entire FM band. Each MCSc has a built-in, fuse-protected power supply. MCSc units also have built-in mixing networks so that the output of each MCSc in a system may be plugged into the next MCSc; at the final output all of the channels are being fed into one coaxial cable.

AGC action enables MCSc units to provide uniform outputs even though the strengths of the inputs vary. Two operating controls (Gain & AGC) increase the versatility of these amplifiers.

Gain: at least 46 db, ch. 2-6; 38 db, ch. 7-10; 35 db; 11-13. Max. output; 1.4 volts (for less than 1% cross-modulation); 2 volts (for less than 3% cross-modulation).

Net MCSc—**$84.00**; MCSc-FM—**$180.00**



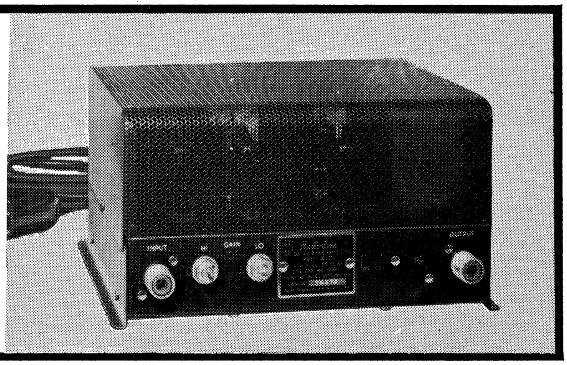
MAST MOUNTED SINGLE CHANNEL AMPLIFIER

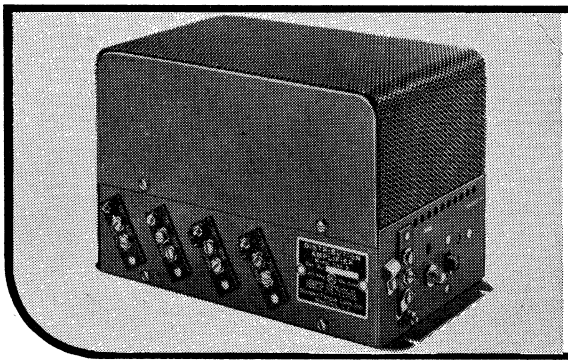
MODEL CB—Completely weatherproof. Amplifies any specified VHF channel. Low noise. 21 db minimum gain on lo band; 18 db minimum on high band (when 1 output is used). Max. output 0.5 volts for less than 1% cross-modulation. 300 ohm input; two 75 ohm mixing outputs. Net **$31.50**

BROADBAND AMPLIFIER

MODEL MLA-B—Broadband VHF amplifier with all the features essential for easy installation and superior reception in large or small TV systems. More than 40 db amplification on all VHF channels. Separate high and low band tilt and gain controls.

MAX. OUTPUT (across 75 ohms) 2.5 volts per band for less than 1% cross modulation. 3.5 volts per band for less than 3% cross modulation. Net **$89.95**





ALL-CHANNEL VHF AMPLIFIER (8 Outlets)

MODEL DA8-B—Provides 8 amplified, isolated TV outlets from one input. Choice of 75 ohm or 300 ohm input and output. 10 db minimum gain. Gain control.

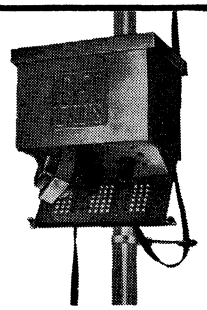
MASTER ANTENNA SYSTEM COMPONENTS

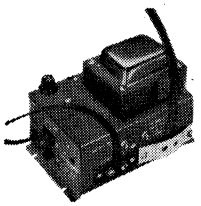
for motels, hotels, apartment houses, schools, etc.

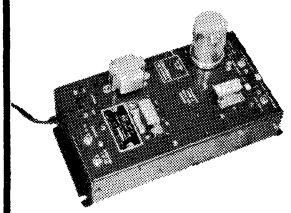


MAST-MOUNTED TV/FM AMPLIFIER (with remote power supply)

MODEL AB-3—Low-noise amplifier virtually eliminates snow. Can be used in a fringe area home installation, or as a pre-amplifier in a master TV system.

The remote power supply sends AC power up to the mast mounted amplifier on the same down-lead that carries the antenna signal down. It provides the correct power to the amplifier for any length of connecting cable up to one mile (when open twin-lead is used). Amplifier uses low noise frame-grid tubes. Provides 25 db minimum gain on all VHF-TV and FM stations. Choice of 300 ohm or 75 ohm output. Stripless terminals for 300 ohm twinlead; solderless "quick-disconnect" terminals for 75 ohm coax. No balun is needed because the input is matched to 300 ohm antennas. Net **$64.50**



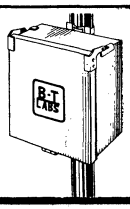


TRANSISTOR TV/FM AMPLIFIER

MODEL BT-3 — For fringe areas, home or Master TV installations. Low noise figure: 5 to 7 db. At least 18 db gain on channel 2; 15 db, channel 6; 19 db channels 7-13; and 9 to 15 db on FM. It can be powered by AC or battery. Provision for split or combined hi-band and low-band input. Solderless 75-ohm coaxial fittings at input and output.
Net **$49.95**

TV/FM AMPLIFIER

MODEL HAB — For use in master, community and home TV systems. 25 db min. gain. Both 300 ohms inputs and outputs. Separate hi and lo band gain controls. Uses frame grid tubes.
Max. Output (across 75 ohms): 0.9 volts for less than 1% cross modulation (low band); 0.6 volts for less than 1% cross modulation (high band); 2.5 volts for less than 3% cross modulation (low band); 1.0 volts for less than 3% cross modulation (high band). Net **$43.20**



RADIATION-PROOF HOUSING

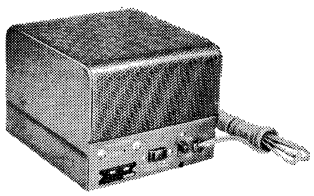
MODEL MRH-A—Weatherproof and radiation-proof enclosure for Master TV equipment. Has perforated mounting surface and adjustable support brackets. Front-opening sealed door and sturdy hasp. Irridite-finish, cadmium-plated steel. 18¼" x 14" x 6". Net **$39.00**

AC LINE FILTER

MODEL MLF—60 db RF isolation between amplifier and power line. Two AC receptacles, one power cable input connector. Mounts in MRH-A, or BH-1.
Net **$12.50**

INDOOR BREEZEWAY HOUSING

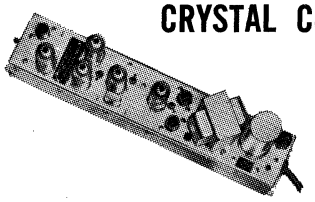
MODEL BH-1—Fully ventilated. Perforated mounting surface. Keyed slots for vertical or horizontal mounting. Provision for locking. 20" x 27" x 10½".
Net **$29.95**



CONVERTERS

UHF-to-VHF CONVERTER-AMPLIFIER MODEL UC-2 — Ideal for small systems. While it is not crystal controlled, it is quite stable when installed indoors. The UC-2 has a built-in power supply and two 75 ohm mixing outputs for maximum flexibility. When one output is used, it provides a minimum of 6 to 10 db gain, depending on conversion (3 db less when both outputs are used or terminated). The input is matched to 300 ohms. Net **$90.**

CRYSTAL CONTROLLED VHF AND UHF CONVERTER-AMPLIFIERS



— Featuring built-in power supplies and mixing circuits for compact, inexpensive head end systems. These units provide amplification as well as conversion.

UHF-to-VHF CONVERTER-AMPLIFIER. Model MUC — Converts specified UHF channel to specified VHF channel. Gain: 15 to 30 db (depending on conversion). Oscillator Stability: total change less than 0.01% over ambient temperature range 0°F to 110°F. Connections: 300 ohm input and two 75 ohm mixing outputs. Net **$240.**

HI-to-LO CHANNEL VHF CONVERTER AMPLIFIER. Model MVC — converts a specified VHF high channel (7-13) to a specified VHF low channel (2-6). Oscillator stability: Total change less than 0.01% over temperature range of 0°F to 110°F. Connections: 75 ohm input and two 75 ohm mixing outputs. Net **$240.**

LO-to-LO CHANNEL VHF CONVERTER-AMPLIFIER. Model MLC — converts a specified VHF low channel (2-6) to another specified VHF low channel (2-6). Gain: 20 to 40 db depending on conversion. Oscillator stability: Total change less than .01% over temperature range 0°F to 110°F. Connections: 75 ohm input and two 75 ohm mixing outputs. Net **$240.**

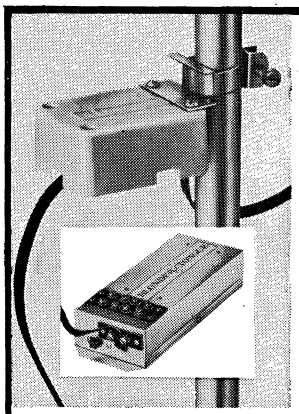
PRODUCTS TO IMPROVE HOME TV RECEPTION



TRANSISTOR MAST-MOUNTED 4-SET TV/FM BOOSTER, Model AB-4

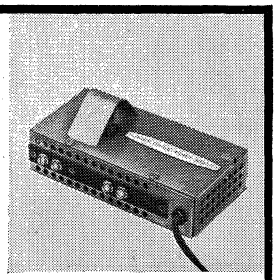
The world's most compact, powerful booster . . . a complete amplifier/distribution system that will improve TV reception on up to 4 TV or FM sets. It consists of a transistor booster which is designed for mast mounting or anywhere along the lead-in and a separate battery power supply which can be installed in the house.

The Transistor circuit provides lowest noise, maintenance free operation —no tubes to burn out or replace—no heat dissipation problems. 17 db average gain on channel 2; 15 db on channel 6; 8.5 db average gain on high band (7-13) when used for one set. 4 set coupler incorporated in remote power supply distributes fully isolated amplified signals on up to 4 TV or FM sets. Uses 4-low-cost flashlight batteries. Net **$19.**

TV/FM POWER BOOSTER, MODEL BTA

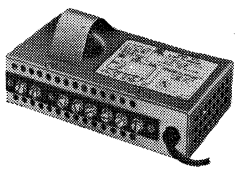
Low cost amplifier improves TV (black & white or color) and FM reception. Increases signal strength (7 to 9 db, channels 2-13; 4-8 db FM). 6 db average noise figure.

Features: stripless 300 ohm terminals for easy installation; low-noise, frame grid tube. Net **$12.95**



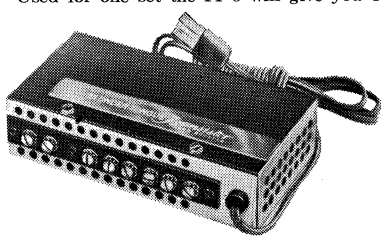
4-SET TV/FM BOOSTER, MODEL B-24c

Triples signal power to one set. Also acts as an amplified coupler to operate up to 4 TV or FM sets. Provides proper impedance match and isolation between sets and increases picture power when used with 2 or 3 sets. With 4 sets it insures that each TV or FM set receives more than 90% of the signal power picked up by the antenna. Net **$15.95**



TRANSISTOR 4-SET TV/FM BOOSTER, MODEL IT-3

Because it is designed around a rugged, long life transistor, the IT-3 is very inexpensive to operate and requires almost no maintenance. The transistor takes so little power that the IT-3 need never be turned off, and there are no tubes to replace. Weak, snowy pictures mean that your antenna cannot pick up a strong enough signal. Used for one set the IT-3 will give you 4 to 8 times (voltage) as strong a signal on channels 2 to 6 and over 3 times as strong a signal on channels 7 to 13.

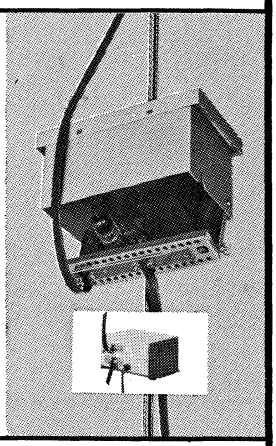


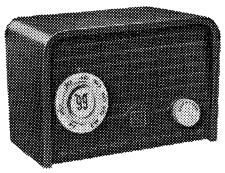
Used for two, three or four TV and/or FM sets, this unit will provide: (1) an excellent impedance match; (2) the necessary isolation between sets; (3) an increase in antenna signal power. Net **$20.**

VHF TV ANTENNA BOOSTER,

Model AB-2 (with RP-2 remote power supply)

All-channel VHF booster mounted at the antenna, is housed in weatherproof housing, and can be located 500 ft. from remote on-off control at TV set. Provides more than 9 db gain on all VHF channels. Single down lead carries AC power up to the amplifier and also conducts the amplified signal to the set. Uses frame-grid 6JD8 tube for highest signal-to-noise ratio. Convenient swing down case simplifies maintenance. Employs 300 ohm, stripless terminals. Net **$32.40**



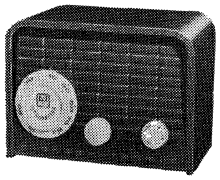


UHF CONVERTER Model 99R

Supplies UHF reception for VHF receivers in primary signal areas. Tunes complete UHF range from 470 to 890 mc. Converts to VHF channel 5 or 6. Features three section tuners; 300 ohm stripless VHF and UHF TERMINALS, and drift-compensated circuitry. Net **$16.75**

ULTRAVERTER UHF CONVERTER Model BTU-2S

Deluxe two-tube converter with low-noise frame-grid IF amplifier. For all UHF receiving areas, especially fringe and translator applications. Output on channel 5 or 6. Features stripless 300 ohm terminals, speed and fine tuning knobs, shielded three sections "ultra tuner." Net **$28.00**



AMPLIVERTER UHF CONVERTER, Model BT-70

CLEGG ZEUS VHF TRANSMITTER FOR 6 AND 2 METERS

A highly efficient, AM, high power VHF transmitter for full coverage of the amateur 6 and 2 meter bands and associated Mars frequencies. Maximum TVI suppression.

Automatic modulation control with up to 18 db of speech clipping provides magnificent audio with "talk power" greater than many kilowatt rigs.

This beautiful unit with its ultra-stable VFO is the ultimate in VHF equipment for amateur and Mars operation.

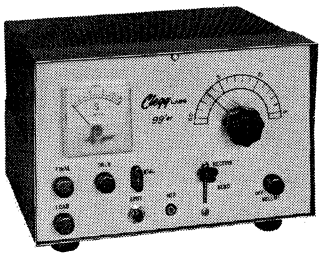
Amateur Net Price: $595.00

INTERCEPTOR VHF RECEIVER FOR 6 AND 2 METERS

Designed for the serious operator on these bands, the INTERCEPTOR, with cabinet and panel exactly matching the famous ZEUS transmitter, offers performance features unmatched by presently available equipment for these frequencies.

For example, here is a receiver with virtually no cross modulation. Nuvistor RF stages give an extremely low noise figure and sensitivity better than .25 microvolts. Stability is ideal for exacting requirements of SSB and CW.

Amateur Net Price: $395.00

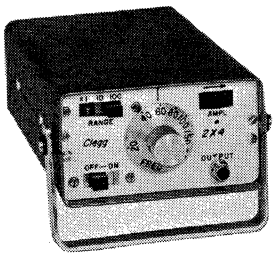


99'er TRANSCEIVER FOR 6 METERS

This completely new transmitter-receiver is ideal for both fixed station and mobile operation. Small in size, low in cost, and tops in performance, the 99'er offers operating features unequalled in far more costly equipments. The double conversion superhet receiver provides extreme selectivity, sensitivity and freedom from images and cross modulation. The transmitter section employs an ultra-stable crystal oscillator which may also be controlled by external VFO. An efficient, fully modulated 8 watt final works into a flexible Pi network tank circuit. A large S meter also serves for transmitter tune-up procedure.

Amateur Net Price: $119.99

NEW "2 x 4" TRANSISTORIZED AUDIO OSCILLATOR



A new low cost transistorized audio so small that it is hard to envision its capabilities.

The "2 x 4" generates pure sine waves from 20 cycles to 20 KC with output voltages from 0 to 2.5 RMS. Despite its small size, laboratory tests of this battery-powered instrument show many characteristics that are superior to larger, more costly laboratory generators.

Amateur Net Price: $49.95

WWV'er TRANSISTORIZED RECEIVER

A fixed crystal-controlled transistorized receiver of matchless performance. Receives WWV signals on all frequencies from 2.5 to 25 MC or any interim frequency through this range with the use of suitable crystals. Equipped for portable use or rack mounting. Has hi and low Z inputs, S meter, enclosed speaker and coax output jack for oscilloscope connection.

TUBE SOCKETS — GENERAL INFORMATION

In order to simplify the selection of sockets and to provide complete specifications for standard, industrial and military requirements, wherever applicable, all Johnson tube sockets have been categorized under a socket standardization program.

By reducing the number of variations in special socket types, it is possible to maintain stocks of military and industrial type sockets as well as standard sockets, permitting shorter delivery cycles on quantity orders. Specifications for the three variations of each socket type are listed within each section of descriptive matter.

Detailed specifications covering the complete Johnson tube socket line have been prepared for Engineering Department use — should you desire a copy of Socket Standardization Booklet 536, please make your request on company letterhead.

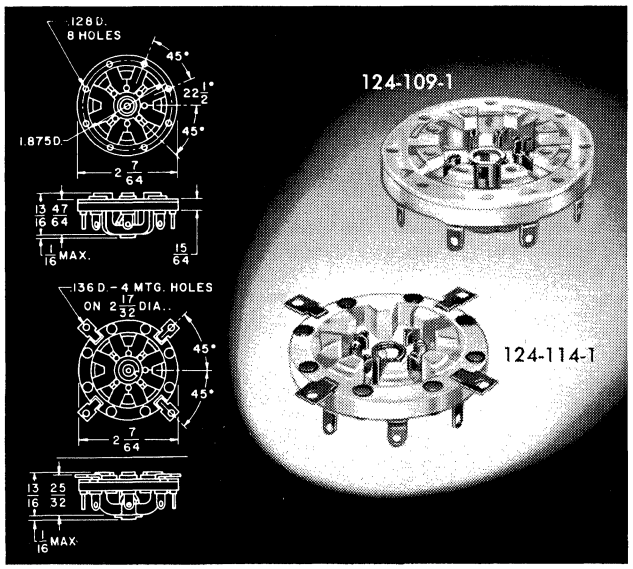
Designed for use with high power transmitting tubes, these sockets are available in many designs – with or without, low inductance screen grid by-pass capacitors. Basic socket is molded of low dielectric loss-factor Kel-F plastic. Control grid contact "guide" is machined for greater alignment accuracy, and tapped for 6-32 machine screw. All contacts are low-resistance silver-plated beryllium copper. Tube pin contacts are heat treated to provide positive contact pressure as well as extended life. Annealed soldering tabs may be easily bent or formed. **Additional specifications and information on this group of sockets are available on Data Sheet 755.**



Rugged light weight basic socket with silver-plated brass mounting saddle. Cathode terminals insulated. Four elongated .140" x .234" mounting holes to accommodate mounting circle diameters from $2^{27}/_{64}$" to $2^{39}/_{64}$". Mounts below chassis through $1^{21}/_{32}$" diameter hole.

Cat. No.	Net Price
124-107-1	**$5.50**

Same as 124-107-1 except cathode terminals grounded. Four mounting holes .136" diameter on circle of $2^{17}/_{32}$" diameter.

PILOT LIGHTS — GENERAL INFORMATION

The pilot lights listed on these pages have been classified by the E. F. Johnson Company as "PREFERRED TYPES", and are immediately available at parts distributors throughout the country. Specials, including types meeting military specifications are available in production quantities.

When ordering: -1 indicates clear jewel (ie. 147-1000-1); -2, red; -3, green; -4, amber; -5, blue; and -6, opal. Green and blue not recommended for use with neon lamps. In pilot light sockets with built-in resistors for neon bulbs — higher resistance values give longer life, lower resistance values give greater brilliance.

For detailed specifications covering the complete Johnson pilot light line, request Catalog 751 using your company letterhead.

JAMES MILLEN
MALDEN · MASSACHUSETTS

The No. 90923 oscilloscope is an extremely compact (3½ inches high) rack panel general purpose oscilloscope utilizing the type 3XP — 3 x 1½ inch rectangular face tube. The No. 90923 is complete with vertical and horizontal amplifiers for balanced deflection and a very linear sweep generator.

Miniature input terminals are on both the front panel and the rear for vertical amplifier input, horizontal amplifier input and synchronizing input. The linear sweep generator covers two cycles per second to 30 kcs. per second in seven overlapping ranges. The trace is unusually sharp and bright due to 2040 volts accelerating potential.

The No. 90923 is ideally suited for many applications, and in particular, for production test. Its small panel uses up very little space in a test rack and the mu-metal shield around the cathode ray tube shields it against magnetic fields so that the oscilloscope may be used accurately in locations with strong stray magnetic fields. The cathode ray tube is of the mono-accelerator type in which the electron beam is accelerated at the electron gun so that field distortions are minimized and excellent deflection linearity is achieved as well as a very uniform spot size over the entire area which the beam scans.

MINIATURIZED HIGH RELIABILITY VARIABLE CAPACITORS

NO. 25000 SERIES — **MACHINED FROM SOLID BARS OF EXTRUDED BRASS**

Modern demands for miniature precision, high Q variable air dielectric capacitors with high reliability require that all of the stator plates be machined from a solid block of brass and that all of the rotor plates be machined from a solid block of brass. Staked, soldered, or washer-spaced types of construction are adequate for larger capacitors with wider air gaps but are entirely inadequate for miniature high reliability capacitors for use at high frequencies. The stator terminal is an integral part of the stator. This results from extruding the exact shape required. The rotor shaft is an integral part of the rotor, thus alignment of shaft with rotor is perfect and there are no pins or press fits.

Special capacitors which can be manufactured using all or part of the tooling for standard capacitors are designed and manufactured to order.

MINIATURIZED COMPONENTS

DESIGNED for APPLICATION miniaturized components developed for use in our own equipment such as the 90901 Oscilloscope, are now available for separate sale. Many of these parts are similar, in most details except size, to their equivalents in our standard component parts group. In certain devices where complete miniaturization is not paramount, a combination of standard and miniature components may possibly be used to advantage. For convenience, we have also listed on this page the extremely small sized coil forms from our standard catalog.

Midget Absorption Frequency Meters

Many amateurs and experimenters do not realize that one of the most useful "tools" of the commercial transmitter designer is a series of very small absorption type frequency meters. These handy instruments can be poked into small shield compartments, coil cans, corners of chassis, etc., to check harmonics; parasitics; oscillator-doubler, etc., tank tuning; and a host of other such applications. Quickly enables the design engineer to find out what is really "going on" in a circuit.

Types 90604 thru 90610 are extremely small and designed primarily for engineering laboratory use where they will be handled with reasonable care. The most useful combination being the group of four under code No. 90600 and covering the total range of from 3.0 to 140 megacycles. When purchased in sets of four under code No. 90600 a convenient carrying and storage case is included. Series 90601 are slightly larger and very much more rugged. They are further protected by a contour fitting transparent polystyrene case to protect against damage and dirt. This latter series is designed primarily for field use and are not quite as convenient for laboratory use as the 90605 thru 90608 types. All types have dials directly calibrated in frequency.

The MS line of Cannon Plugs is designed to meet Military Specification MIL-C-5015...the military specification covering electrical connectors. Until recently this line was designated as the "AN" line. The complete MS plug consists of two mating units...a plug assembly and receptacle assembly.

MS plugs were designed originally for aircraft but are now used widely in other fields. These plugs, although designed and approved under military specification for use by the armed forces, are ideal for commercial and industrial applications where the same quality and dependability are desired. Industry in general has appreciated the relatively low costs, uniform quality and interchangeability as prescribed in the MIL Spec.

MS plugs are available with from 1 to 100 contacts in 15 different shell diameters ranging from .250 to 2.550 inches. Each plug meets or surpasses the latest Specification MIL-C-5015. Each insert arrangement is available with pin or socket contacts, and will mate with the MS type having the same size and layout.

Shells are high grade aluminum alloy, lightweight and non-magnetic. All metal parts other than contacts are cadmium plated with a chromate conversion finish in dull olive drab.

Contacts are made of the best conductive material commensurate with strength. Socket contacts are full-floating, have a closed entry construction to avoid distortion, and have beryllium copper springs with excellent fatigue properties.

MS-E AND MS-R PLUG SERIES

MS-E (formerly called AN-E) and the new MS-R plugs are designed to operate in extreme environmental conditions...such as moisture condensation, corona formations, flashover, and vibration. This environmental sealing is accomplished with a resilient grommet at the rear of the insulator which has internal restrictions in a wire cavity acting like "O" rings around the wire. Insulators are made of resilient material to prevent damage from vibration. Resilient insulators and grommets provide a plug completely sealed from cable to cable, through the mated plugs.

MS-E Cannon Plugs are available in two types: Series ME with external cable clamp, and Series CT with shortened endbells and internal clamping action.

The MS-R Cannon Plugs are identical to the MS-E Series CT. The only difference is the addition of an "O" ring seal about the 3106 and 3108 plug barrels which supplements the interfacial seal.

The shells, endbells, and coupling nuts are of aluminum alloy. They are cadmium plated and converted by chromate treatment to an olive drab finish as required by MIL-C-5015. Insulators and grommets are of a lightweight resilient polychloroprene.

The pin and closed entry socket contacts are machined from copper alloys of high conductivity, and are silver plated.

CANNON PLUGS

CANNON ELECTRIC COMPANY

MORPHO* PLUG SERIES MH

MORPHO is the trade name of the new Cannon Plug Series MH. MORPHO represents a new concept in the art of plug design and application. A single style hermaphrodite contact is used for both plug and receptacle. The contacts are crimp-type to eliminate soldering. After crimping, the contacts are snapped into the insulator.

Hermaphrodite features are also embodied in the insulators. A single insulator is used for either the plug or the receptacle. Each insulator will accommodate up to 12 contacts. Insulators are designed in modular form so that they may be arranged to provide numerous alternate positions.

Low engagement and disengagement forces of MORPHO will be of special interest to users requiring high density layouts.

Here are some major features of the MORPHO plug:

CONTACTS

MORPHO plugs use a single style of snap-in removable crimp contact. There is no pin and socket contact of the conventional type. Instead, one contact is used for both the plug and receptacle. Contacts are designed for crimping wire sizes #20 through #27.

Contact material is a fine grain alloy of phosphor bronze. Standard contact plating is Speculum.

INSULATORS

Only one insulator is required for either the plug or receptacle. By reversing one or two identical insulators, they will mate. This is because of the hermaphrodite design of the insulator.

Each insulator module will accommodate up to 12 contacts. Contacts are completely protected within the insulator when installed.

Insulator and shell material is cellulose acetate, series XFB. Cellulose acetate has excellent characteristics in the areas of impact strength, tensile strength, and deformation under load. In addition, it is classed as self-extinguishing by Underwriters' Laboratories.

CANNON PLUGS

STANDARD K AND RK PLUG SERIES

The Standard K Series of Cannon Plugs was the first complete plug series designed (in the late 30's) as airborne equipment. They are lightweight, rugged and durable, and are used extensively in many fields outside of the aviation industry.

The principal difference between MS and K types is found in the coupling thread...the K line uses acme thread and the MS line uses unified screw threads.

While K and RK are related fittings, their differences prevent mating of a K type with the RK type. Essentially the RK is a reverse coupling version of a standard K. Because of this, different insert housings and coupling means are employed, prohibiting interconnection of the two types.

Shell parts are aluminum alloy with standard cadmium finish. Contacts are brass, silver-plated, and are machined from brass rod, with tinned solder pots.

K and RK plugs are available in 7 basic shell types having 8 insert sizes, totalling more than 220 arrangements with a variety of amperage and voltage capacities. They are available with from 1 to 110 contacts in eight size diameters ranging in size from 5/8 to 2-1/4 inches.

MC Subminiature Cannon Plugs are small, cylindrical, sealed plugs of exceptional sturdy construction. These plugs have been designed to withstand moderately severe handling and environmental conditions, and incorporate a shell which has maximum strength within its volume limits. Sealing is accomplished by interfacial compression of the resilient insert, the latter affording a high degree of vibration resistance at the same time. The strong coupling nuts utilize a rugged special Acme thread to permit fast, simple engagement and disengagement.

GOLDEN-D/D SUBMINIATURE

D Subminiature plugs are small, lightweight, rectangular plugs in 5 sizes, with 9, 15, 25, 37, or 50 gold-plated contacts. These compact plugs feature steel or brass shells with gold chromate over cadmium finish, and Zytel or Diall insulators. They will withstand a test voltage (60 cps ac rms) of 1300 volts for one minute with no evidence of breakdown. D Subminiatures are available with contact terminations for coaxial cables and taper pins. Solderless, crimp-type, snap-in contacts are supplied in addition to standard solder cup styles.

The GOLDEN-D is an addition to the D Subminiature line. It supplements the standard "D" and is designed for more critical applications. The GOLDEN-D is dimensionally and physically interchangeable with the standard D with the exception of the solder pot and rear insulator extensions, which are slightly longer. The added length provides better contact stability and increased insulator strength. All-new monobloc insulators are incorporated in the GOLDEN-D for increased strength in miniature size. Insert material is forest green glass-filled Diall. Miniature socket contacts are closed-entry, providing protection against damage by oversized test probes. Pins and sockets are gold plated for high reliability. Coaxial contacts, except grounded coax, are designed to permit them to be snapped-in to the insulator after they have been secured to the cables. Contacts are also removable. Shell finish on the new GOLDEN-D is golden iridite over cadmium plate. Four GOLDEN-D types are available:

- GOLDEN-D with closed-entry contacts
- GOLDEN-D with snap-in ungrounded coaxial contacts
- GOLDEN-D with grounded coaxial contacts
- GOLDEN-D with high voltage contacts

Coaxial contacts are available for both the Standard D Subminiature and GOLDEN-D Series. Accessories for D Subminiature plugs include: Straight Junction Shells, Straight Clamp Type Junction Shells, 90° Junction Shells, Guide Pin Plates, and Floating Mounts.

GSO2 HERMETICALLY SEALED PLUGS

GSO2 Hermetically Sealed Plugs are used wherever instruments are required to be hermetically sealed within a partial vacuum, inert gas, or a constant or controlled pressure.

GSO2 plugs are made with standard MS insert layouts, and with a variety of mounting flanges. These plugs are also available with high-voltage, high-current, and coaxial contacts.

Shells and pin contacts are of steel. Vitreous insulation is used in a manner which creates an hermetic seal and prevents a leakage rate in excess of one micron cubic foot per hour at a pressure differential of 1 atmosphere as tested on a mass spectrometer.

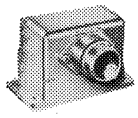
JUNCTION SHELL



DPD-34CL-5/8 AN
JUNCTION SHELL

DPD plugs are designed for unit plug-in applications. They are distinguished from other Cannon lines by their rectangular shape and they provide maximum space utilization on rack/panel chassis equipment. One half of the plug is mounted to a radio rack or panel, for instance, and the other half is mounted to the instrument. By this means instruments can be easily removed for inspection and repair.

The DPD is the standard of the DP (Dual Panel) line and accommodates the widest range of contacts in both style and number. They are available with from 2 to 78 contacts in 22 basic insert arrangements, plus variations. A variety of endbells for junction shells are available. The shell is chamfered to facilitate engagement.

Shell material is die-cast aluminum alloy with cadmium plate finish. Insulation is molded melamine or fabricated phenolic. Inserts are retained by insert retaining clips. Retaining clip is metallic and will ground coaxial contacts unless insulation is specified.

DPA AND DPX MINIATURE PLUGS

In response to a need for a small rectangular rack/panel plug of great strength, Cannon Electric has designed two rugged miniatures, the DPA and DPX. They are similar to the DPD plugs but occupy approximately 35% (for the DPA) and 46% (for the DPX) less area for rack/panel chassis mounting.

The DPA utilizes a one-piece shell construction. The elimination of conventional insert-retaining screws provides a maximum utilization of insert area and results in a new ease of assembly. The insert is held in place by a retaining clip at the rear of the shell.

The DPX has a two-piece split shell construction. Inserts are held in place by means of internal grooves molded into the shell. These grooves accommodate raised shoulders on the insulator, completely embracing and locking the insert assembly. An external assembly ring slips over the shell halves to hold them together. The DPX can be completely assembled without tools.

The standard insert material for the DPA and DPX is melamine. DPA insert layouts accommodate 5 amp and small coaxial contacts. DPX insert layouts accommodate 5 amp, 10 amp, and small coaxial contacts.

SUBMINIATURE **KWIK-TERM** TERMINALS

Cannon Kwik-Term subminiature terminals are now available for use in conjunction with Radar, TV, HF, UHF, VHF, Microwave, and other "sophisticated" circuits.

Kwik-Terms are easily installed into an electronic chassis by simply pressing them into a pre-punched or pre-drilled hole. The TEFLON material of the insulator when pressed into a slightly smaller mounting hole tends to relieve its own stress. This causes a rivet-type action in the TEFLON which anchors and seals the terminal securely and permanently to the chassis. No nuts, washers, staking or soldering is required.

The following features illustrate the advantages of Cannon Kwik-Terms:

- Ease of assembly even in crowded installations
- Installation in seconds
- Saves weight and space—eliminates terminal boards
- Rugged—Kwik-Terms resist vibration and shock
- Wide variety of terminal configurations and pin lengths
- Kwik-Terms are heat resistant for soldering
- Wide variety of finishes, colors, and soldering lugs can be supplied to order
